

The background of the advertisement is a photograph of a medical professional in a white lab coat, a woman in a light blue top, and a young child in a red shirt lying on a CT scanner table. The child is looking up at the woman. The CT scanner's gantry is visible in the background, with the word 'PHILIPS' partially visible on it. A white box with a teal bottom section is overlaid on the left side of the image, containing the Philips logo and product name. The main headline is in large white font at the bottom left. The bottom right section has a teal background with white text.

Brighten the way ahead

Delivering outstanding care for your patients - means exceptional diagnosis, excellent medical and patient care. You need a solution to meet your clinical needs in an environment of increased pressure to manage healthcare spending. Economically sound facilities strive for a low total cost of ownership. Philips' Diamond Select CT program provides an economical, reliable solution with functional upgradeability so you can acquire up-to-date technology for your facility and provide a wider variety of high-quality services to your patients. Philips understands the clinical and economic realities you are facing and brings proven technologies from our advanced CT systems into the Diamond Select portfolio. Satisfy both your clinicians' demands for system performance and your CFO's demands for return on investment.

Key advantages

- Exceptional performance with up to date features and applications such as Philips dose management software
- Designed around your everyday needs with proven high-quality technology
- CT system is certified by demanding quality and compliance checks
- Reliable, high throughput systems with Philips tailored support services to enhance your ownership experience

Qualified refurbishment program to provide you with peace of mind

Disassembly

Decontamination and professional repainting

Parts replacement

Software updates

Testing and calibration

Documentation and certification

Customer delivery

Customized application and service support

Trust and Confidence

All Diamond Select systems undergo a refurbishment process by expert Philips technicians. In our dedicated facilities, systems are put through assessment procedures, testing and quality controls to meet industry standards.

These tests cover key CT system components including the X-ray tube, generator, collimator and bearing. All applicable system performance tests are completed and Image Quality is measured to meet original specifications. Full system calibration, reliability, horizontal and vertical couch movement, gantry tilt and intercom function tests are performed.

Each CT system meets Philips specifications and is rigorously tested for the performance you need, to more easily expand into new clinical applications. These first-class system products are available with full serviceability, clinical education, upgradeability, and a Philips warranty to enhance your ownership experience. As a result you get a highly efficient imaging system that provides years of service to you and your patients.

Delivering Value

Philips partners with you to help get the most out of your investment. With Diamond Select you will benefit from extensive training conducted by experienced applications specialists, local support through our global sales and service organization, a full system warranty, and financial programs that can help you meet your business goals. Philips CT systems deliver dependability, performance and long-term value. You can rely on high-quality, high-performance equipment that provides meaningful technological innovations to help your facility move forward. This proven technology is the basis for our Diamond Select program.

Sustainable Investment

Philips strives to improve people's lives and make the world healthier and more sustainable through innovation. The Diamond Select program offers refurbished systems that allow you to provide high-quality care for your patients. At Philips Refurbished Systems, we are committed to making efficient use of resources across the entire lifecycle. Extending the useful lifetime of a system and its components just makes sense.
