

PHILIPS

IntelliSpace Portal

Enterprise Solutions

A single Advanced Visualization solution connecting multiple locations

One work environment, one Advanced Visualization solution

IntelliSpace Portal

IntelliSpace Portal Enterprise¹

The solution lets you work as one across your network, bringing locations and people together. It connects multiple sites to support productivity and is designed to reduce the complexity of resource planning today while preparing you for growth tomorrow.

¹powered by Concerto

Growing with you

Join separate geographical sites with IntelliSpace Portal Enterprise to create common access and workflows.

With up to 100 concurrent users, it adapts when more users and sites come online.

Do more with one worklist

The solution server creates a unified global worklist containing all studies stored in your IntelliSpace Portal servers.

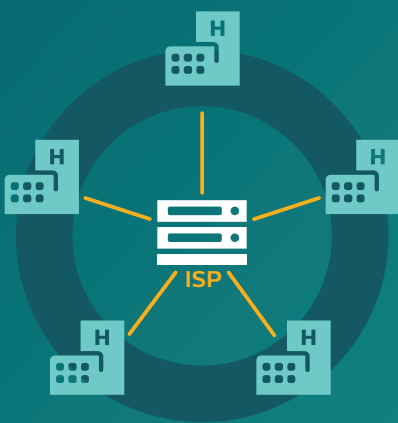

Say goodbye to downtime

Patient care can't wait. That's why IntelliSpace Portal features a failover system to help maintain high availability. Should one IntelliSpace Portal server from the single site "farm" go down, another server automatically takes over. IntelliSpace Portal continues working with the remaining portal server's resources.

Rely on consistent performance

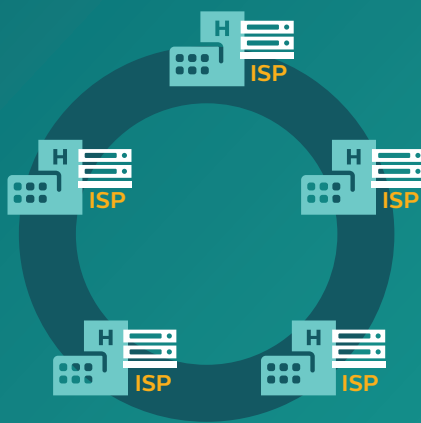

Even at heavy loads, expect IntelliSpace Portal Enterprise to deliver consistent performance for patient care. It balances the load by automatically routing users to the most suitable Portal server on site, based on data type and server load.

Your advanced visualization needs in one platform that scales with you

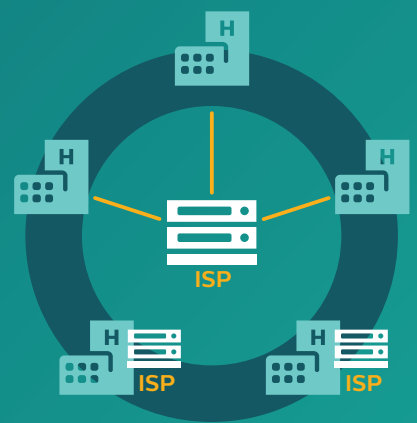

Centralized

- One clinical licensing model
- One central database
- One service contract
- One seamless workflow

Distributed

- One clinical licensing model
- Multiple sites database
- One service contract
- One graphical user interface

Hybrid

- One clinical licensing model
- Partial sites database integration
- One service contract
- Hardware configuration allows further full integration

Continuous evolution and services

Clinical imaging technologies are evolving constantly. Turn this change to your advantage with our solution. Designed around the principle of continuous evolution, IntelliSpace Portal Enterprise helps you manage shifting challenges and shape high-efficiency and technology-driven healthcare for the years to come.

Your partner to improve patient care

When you choose Philips, you're investing in a long-term relationship. We're committed to helping you realize the full clinical and operational potential of our solution throughout your organization. But our product portfolio is just one element of successful growth and change.

The key benefits of Philips services solutions

Protect your investment from day one

The pace of technology is very fast, but investments will not become obsolete year by year. Our solution capabilities adjust to the specific needs of your enterprise. Continuous software upgrades and hardware updates, for example, enhance return on investment.

Financial considerations

Lower total cost of ownership for dealing with rotation of staff (training), pace of technology (software and hardware upgrades), and support. Predictable costs operationalized through budgets instead of capital expenditure.

Clinical and workflow progression

A steady stream of continuous evolution of clinical depth in applications and modalities, workflow performance (speed and power), and IT integration is offered to you with the aim to expand and deepen your clinical coverage.

Discover how **IntelliSpace Portal Enterprise solution** can help you drive standardization and change your workflow.
