Hospital  
respiratory care

# Simplicity and **versatility**

Philips Respironics Trilogy 202 portable ventilator

# Support many needs with a **single** ventilator

Addressing the varied ventilation needs of your patients without burdensome equipment changes that interrupt the continuity of care is easy with the Trilogy 202. Both a volume-control and a pressure-control ventilator for invasive and noninvasive ventilation, it provides versatile breath delivery and setup options.

With one simple setting change, the Trilogy 202 supports either active or passive exhalation breathing circuits to accommodate changes in circuit preference. Because the Trilogy 202 has the unique ability to compensate for leaks in both pressure and volume control modes, using simpler passive circuits may help you save time and money.

## Intra-hospital transport

The Trilogy 202 allows freedom of movement. The three-hour internal battery and optional three-hour detachable battery provide sufficient power for intra-hospital transports, with plenty of time for any delays or detours. Its small size, integrated carrying handle, and weight of only 5.6 kg facilitate convenient handling during intra-hospital transports.

# Detailed data

A secure digital (SD) card stores historical ventilatory data so that you can review treatment trends using our DirectView software.

- Breath-by-breath waveforms
- Short-term and long-term trends
- Statistics and usage patterns
- Upload prescription via SD card

# Simply versatile

Intuitive menu for quick changes

Passive circuit allows a simpler setup

## Synchrony

The Auto-Trak algorithm improves patient-ventilator synchrony by adjusting to changing breathing patterns and dynamic leaks. The auto-adaptive triggering, cycling, and leak adjustments may help reduce the time clinicians spend adjusting alarm thresholds and re-fitting masks.

## Leak compensated volume modes

Trilogy 202 offers all the conventional volume-control modes: AC, SIMV (with or without PS), and CV. Its unique ability to compensate for leaks in a volume control mode delivers tidal volume, even during noninvasive ventilation or when invasive cuff leaks are present.

## Setup

Whether you are in a sub-acute or chronic care environment, set up is simple with the Trilogy 202. The color screen and intuitive menu navigation allow rapid settings and changes for a wide range of patients. The integrated blender provides oxygen administration from 21% – 100%. And for patients who may wear during the day and rest at night, Trilogy 202 supports two different treatment prescriptions.

The large screen with intuitive menu navigation allows for rapid settings and changes for a wide range of patients and can display pressure and flow waveforms.
