A. Training Pads Connector Socket — Receptacle for the training pads connector plug.

B. Pads Connector LED — Flashes to indicate the socket location when device is turned on. Inserted pads connector plug covers the LED, which stops flashing when connector plug is properly seated.

C. Remote Control Receiver Window — Receives signals from the optional remote control.

D. Speaker — Delivers voice instructions from the AED Trainer 3. Speaker volume can be adjusted with the remote control or set in the device configuration.

E. Connector — For future use.

F. Green Ready Light — Illuminates when the AED Trainer 3 is turned on; flashes when device is receiving commands from the remote control; stays off when the device is not in use.

G. Infant/Child Key Port — Receptacle for the Training Infant/Child Key. When Key is inserted, the AED Trainer 3 operates in Infant/Child mode to simulate defibrillation of an infant or child under 8 years old or 25 kg (55 lbs).

H. Green On/Off Button — Turns on the AED Trainer 3 and starts voice instructions.

I. Orange Shock Button — Controls delivery of simulated shock. The button flashes when a shock is advised during a scenario.

J. Battery Compartment — Contains the four replaceable AA size alkaline batteries (not provided) used to power the AED Trainer 3.

K. Operating System Card — Contains the Trainer operating system, all voice commands, and device configuration. The Operating System Card must be installed in the AED Trainer 3 to use the device.
About this edition

The information in this guide applies to the AED Trainer 3 model 861467. This information is subject to change. Please contact Philips at www.philips.com/productdocs or your local Philips representative for information on revisions.

INTRODUCTION

DESCRIPTION AND INTENDED USE

The model 861467 AED Trainer 3 is designed to prepare emergency responders to use the HeartStart FR3 automatic external defibrillator (AED) and other AEDs. Together with appropriate manikins, the AED Trainer 3 is intended to give realistic training on delivering correct treatment, including shock delivery and CPR, to a cardiac arrest victim.

The AED Trainer 3 provides eight training scenarios that simulate realistic episodes of sudden cardiac arrest (SCA) and help responders become familiar with use of the HeartStart FR3 AED in an emergency. These scenarios are compatible with training programs developed by internationally recognized responder programs.

The AED Trainer 3 is shipped with a factory default setup that complies with the ERC (European Resuscitation Council) and AHA (American Heart Association) 2010 Guidelines. The device may also be configured to conform to local protocols or Guideline Updates.

NOTE: Before using the HeartStart FR3 Defibrillator, the responder should have completed an appropriate responder training program, which may include the use of the AED Trainer 3. Having completed such a course, the responder should demonstrate a proficiency in assessing the patient for lack of responsiveness and absence of breathing, cardiopulmonary resuscitation (CPR), and knowledge of applicable medical protocols and procedures.

FEATURES

The AED Trainer 3 is designed to replicate the operation of the HeartStart FR3 AED. However, it has no high-voltage capabilities, ensuring safety during training. It provides simulated shock delivery.

The AED Trainer 3 can be used to provide training on the following key features of the HeartStart FR3 AED:
• Fast delivery of therapy. The AED Trainer 3 carry case duplicates the auto-on feature of the FR3 carry case. When the case is opened, the AED Trainer 3 automatically turns on.

• Pre-connected pads. Like the FR3 AED, the AED Trainer 3 uses pre-connected pads to help optimize response time.

• Infant/Child Key. The AED Trainer 3 comes with a Training Infant/Child Key to replicate the infant/child mode of the FR3 AED.

• Voice prompts. The AED Trainer 3 guides you through each step of the training scenario with the same voice prompts as the FR3 AED.

• Extensive configurability. Like the FR3 AED, the AED Trainer 3 configuration can be customized and its operation easily updated as needed.

NOTE: The Training Infant/Child Key cannot be used with the HeartStart FR3 AED. An FR3 Infant/Child Key is required for use with the AED.

HOW SUPPLIED
STANDARD PACKAGE CONTENTS
The AED Trainer 3 is shipped with the following items as standard:

• one AED Trainer 3
• one Carry Case
• one Training Infant/Child Key, pre-installed on tether in carry case
• one External Manikin Adapter
• one pre-installed AED Trainer 3 Operating System Card containing the AED Trainer 3 operating system
• one reusable HeartStart Training Pads III interconnect cable
• one set of reusable HeartStart Training Pads III
• one printed Instructions for Use in English and Japanese
• one CD-ROM containing Instructions for Use in additional languages
• one multi-language Quick Start Guide
• one set of “Training Only” stickers in multiple languages

OPTIONAL ACCESSORIES
The following accessories are available separately for use with the AED Trainer 3:

• Remote Control, with one replaceable lithium CR2025 3V battery [REF: 989803171631]
• Replacement Carry Case for AED Trainer 3 [REF: 989803171731]
• Replacement AED Trainer 3 Operating System Card [REF: 989803171641]
• Replacement HeartStart Training Pads III Interconnect Cable [REF: 989803150201]
• Replacement HeartStart Training Pads III [REF: 989803150181]
• Replacement External Manikin Adapters, set of 5 [REF: M5089A]
• Laerdal LINK Technology Training Pads [REF: M3755A]
SETTING UP THE AED TRAINER 3

To set up the AED Trainer 3 for operation, you will need to ensure that the Operating System Card is properly installed, install the batteries (not provided), select a different language if you do not wish to use U.S. English, and connect the training pads. Instructions for each of these tasks follow.

CHECKING THE OPERATING SYSTEM CARD

The AED Trainer 3 Operating System Card contains the operating system for the AED Trainer 3. The AED Trainer 3 is shipped with the Operating System Card pre-installed. To remove, re-install, or replace the Operating System Card, follow the steps below:

1. Squeeze the latch on the battery compartment lid to release the lid. Lift out the lid and set it aside.
2. Check that the Operating System Card is installed in the slot at the top of the compartment. If not, install the Operating System Card in the orientation shown.

INSTALLING THE BATTERIES

The AED Trainer 3 requires four AA size alkaline batteries (not included). To install or replace the batteries in the AED Trainer 3, follow the steps below:

1. Squeeze the latch on the battery compartment lid to release the lid. Lift out the lid and set it aside.
2. Install four AA size alkaline batteries in the battery compartment oriented as illustrated inside the compartment.

NOTE: Use only fresh batteries of the same type.

3. Replace the battery compartment lid.
4. Return the AED Trainer 3 to its case.
SELECTING A LANGUAGE

The default language of the AED Trainer 3 is U.S. English. To set up the AED Trainer 3 for another language, follow the steps below.

1. Press and hold both the green On/Off button and the orange Shock button for about three seconds. The AED Trainer 3 announces the default language, “U.S. English.”

2. Release both buttons.

3. Press and hold the orange Shock button to scroll through each available language. The AED Trainer 3 announces each new language.

4. When the desired language is announced, press the green On/Off button to turn off the AED Trainer 3 and store the selected language. The AED Trainer 3 will use this language when it is next turned on.*

5. Apply the appropriate “Training Only” sticker for the language selected, as illustrated below.

* The AED Trainer 3 can be turned on by pressing either the On/Off button or the shock button.
CHANGING THE CONFIGURATION

The AED Trainer 3 is shipped with a configuration replicating the default factory settings of the FR3 AED. If you want to change the AED Trainer 3 configuration to match local protocols or for other training purposes, follow the steps below:

1. Squeeze the latch on the battery compartment lid to release the lid. Lift out the lid and set it aside.

2. Remove the Operating System Card from the slot at the top of the compartment.

3. Insert the Operating System Card into the card slot of your computer or, if no slot is available, install the card into a standard card reader and connect it to your computer.

4. Open the AED Trainer 3 Configuration program and adjust the parameter settings as desired. See page 15 for detailed information about the available settings.
5. After making all desired changes, click on “Update.”

6. Click “Exit” to close the configuration program.

7. Remove the Operating System Card from the computer or card reader and replace it in the AED Trainer 3. See page 4 for directions on installing the card. The AED Trainer 3 configuration will be updated automatically the next time the AED Trainer 3 is turned on.

CONNECTING THE TRAINING PADS

The AED Trainer 3 may be used with either HeartStart Training Pads III or Laerdal LINK Technology Training Pads.

HEARTSTART TRAINING PADS III

To connect the HeartStart Training Pads III to the AED Trainer 3, follow the steps below.
1. Remove the HeartStart Training Pads III from their storage bag, leaving them on their liner.

2. Remove the interconnect cable from its storage bag. Connect the pads cable to the interconnect cable.

3. Plug the interconnect cable’s yellow connector into the pads connector socket on the front of the AED Trainer 3. Be sure the connector clicks into place.

4. Place the AED Trainer 3 with the pre-connected pads in the carry case. The case is designed to store the AED Trainer 3 with the pads pre-connected.

The HeartStart Training Pads III are designed for up to 100 uses. To help ensure continued performance, avoid leaving the pads in heat or direct sunlight. To replace the pads, disconnect the connector plug from the AED Trainer 3 and repeat Steps 1 through 3, above.

LAERDAL LINK TECHNOLOGY TRAINING PADS

To connect the Laerdal LINK Technology Training Pads to the AED Trainer 3, follow the steps below.

1. Remove the Laerdal LINK Technology Training Pads from their storage bag, leaving them on their liner.
2. Plug the pads connector into the pads connector socket on the front of the AED Trainer 3. Be sure the connector clicks into place.

3. Place the AED Trainer 3 with the pre-connected pads in the carry case. The case is designed to store the AED Trainer 3 with the pads pre-connected.

ACCESSING THE TRAINING INFANT/CHILD KEY

The Training Infant/Child Key is supplied on a tether pre-installed in the AED Trainer 3 carry case. To access the Training Infant/Child Key for use, remove it from its compartment in the case lid, and extend the tether to insert the Key into the Infant/Child Key port on the AED Trainer 3.
NOTE: Do not store the Training Infant/Child Key installed in the AED Trainer 3. Install the Training Infant/Child Key in the AED Trainer 3 only when teaching defibrillation of infants or children under 8 years old or 55 lbs (25 kg).

USING THE AED TRAINER 3

PREPARING TO USE THE AED TRAINER 3

Before turning on the AED Trainer 3, follow the steps below:

1. Check that the pads are pre-connected as described on page 7. If no training pads are connected when the AED Trainer 3 is turned on, the AED Trainer 3 will provide a voice instruction to place the pads on the patient’s bare chest and then plug in the pads connector by the flashing light.

2. If you are using HeartStart Training Pads III, attach the external manikin adapter provided to the skin of the training manikin as shown below.

3. Place the pads on the adapter as shown.
4. If you are using Laerdal LINK Technology Training Pads, use any Laerdal manikin equipped with Laerdal LINK Technology, such as Laerdal AED Resusci Anne or AED Little Anne. (The Laerdal LINK technology will indicate correct placement of the pads on the manikin.)

5. If you are training in infant/child defibrillation, insert the training Infant/Child Key in the port identified on the diagram on the inside front cover of this manual. The infant/child mode is intended for training in defibrillation of an infant or child under 8 years old or 55 lbs (25 kg).*

**SELECTING A TRAINING SCENARIO**

When you are ready to use the AED Trainer 3, follow the steps below:

1. Press and hold the green On/Off button for approximately six seconds. The AED Trainer 3 will announce “Training” and instruct you to press the orange Shock button to select a training scenario.

---

* The training Infant/Child Key should be kept with the AED Trainer 3, but not connected until you are ready to use the AED Trainer 3 in a pediatric scenario.
2. Press the orange Shock button as directed. The AED Trainer 3 announces the current training scenario number.

3. To select a different scenario, press and hold the orange Shock button to scroll through each of the eight scenarios in sequence. The AED Trainer 3 announces each scenario number as it is reached. See page 17 for a detailed description of each scenario.

4. When you reach the desired scenario, press the On/Off button to turn off the AED Trainer 3 and store the scenario selection on the Operating System Card. The selected scenario will be active the next time the AED Trainer 3 is turned on.

NOTE: The AED Trainer 3 automatically turns off if it is inactive for ten minutes.

RUNNING A TRAINING SCENARIO

To run a training scenario, press the On/Off button to turn on the AED Trainer 3, and following the AED Trainer 3’s voice instructions to simulate use of the FR3 AED in an emergency. For troubleshooting assistance, see page 21.

USING THE OPTIONAL REMOTE CONTROL

If desired, the AED Trainer 3 can be used with an optional remote control that allows the instructor to select and override training scenarios.

The remote control uses infrared light and requires a direct or indirect light path from the remote control to the receiver window on the AED Trainer 3. Do not cover the receiver window when using the remote control. The location of the receiver window is identified on the diagram on the inside front cover of this manual.

NOTE: If a direct line is blocked, pointing the remote control at the ceiling may provide a good indirect light path.
See page 19 for a description of the Remote Control operation.

NOTE: The AED Trainer 3 can be configured for use with the AED Trainer 2 remote control, if desired. See page 6 for directions on changing the configuration.

REGULATORY INFORMATION

The product is in compliance with the essential requirements of Directive 2004/108/EC on electromagnetic compatibility through compliance with:

- IEC 61000-6-1 Electromagnetic Compatibility (EMC) - Part 6-1: Generic standards - Immunity for residential, commercial and light-industrial environments

The product is in compliance with FCC Part 15 Radio Frequency Devices, Subpart B - Unintentional Radiators (May 2004). This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
