Neonatal Event Review detects and documents apnea, bradycardia, and desaturation and provides information for diagnosis and management of neonatal intensive care patients. Clinicians can designate any combination of apnea, bradycardia, or hypoxia as a significant neonatal “event.” Oxy-CRG (oxy-cardiorespirography) combines the compressed trends of a neonate’s beat-to-beat heart rate, respiration, and oxygenation levels in an easy to interpret display on Philips patient monitors. Oxy-CRG is an indicator of breathing efficiency and brain maturity.

Supporting goal-directed therapy
Neonatal Event Review information contributes to decision making by highlighting characteristics and sequences of neonatal events that could have ‘predictive’ value. Knowing the number, severity, and distribution of events can help identify underlying diseases and supports the delivery of the most appropriate treatment.

Automatic detection and storage
Neonatal Event Review contributes to overall efficiency by automating the documentation of up to 50 events over a 24-hour period. This saves time and helps reduce errors associated with manual documentation.

Neonatal Event Review provides:
- Automatic capture of events
- 24-hour event review window
- Storage of 4 minutes of an Oxy-CRG episode for up to 50 events over 24 hours for retrospective review

Oxy-CRG information at a glance
The Oxy-CRG algorithm facilitates more comprehensive evaluation of patient status by:
- Allowing review of the most recent six minutes of Oxy-CRG information.
- Helping to detect critical conditions, including apneic spells, obstructive apnea, mixed apnea, periodic breathing, and disturbed breathing
- Supporting documentation via 1, 2, or 3 cm/min Oxy-CRG recording
Event documentation

Philips offers a bedside recorder or printer, or a central printer for documenting neonatal events and stored Oxy-CRG episodes. Documentation supports hospital release criteria and can be added to the patient record for recall as required.

Twenty-four hours of clinical data is provided at one glance, clearly displaying changes in patient status from one day to the next.

Philips Commitment to Measurement Technologies

Philips is committed to providing best-in-class standard clinical measurements as well as innovative measurements to support clinicians’ decisions at the patient’s side.

Philips continues to build on its proven measurement expertise by:

- Maintaining and advancing the performance of existing, widely used standard-of-care measurements
- Investing heavily in research, development, and clinical validation of new, innovative parameters and algorithms
- Working with strategic partners to integrate next-generation measurements and technologies
- Providing interfaces to more than 100 third-party specialty measurement devices through the Philips VueLink module

Review.

Oxy-CRG is available on these Philips patient monitors

- IntelliVue MP20 and MP30, MP40 and MP50, MP60 and MP70, MP90
- CMS 2002
- V24 and V26

Please ask your sales representative for details on compatibility.
