

Simplicity is experiencing tomorrow today for less

CHRISTUS Hospital – St. Mary Port Arthur, TX

Challenge

Hit hard by Hurricane Rita, this extremely busy CHRISTUS facility was faced overnight with a number of challenges. The hospital had to make an unbudgeted investment in a replacement of its damaged angiography suite, and be up and running in the shortest possible time, without sacrifice of the quality of patient care.

Solution

“Philips provided us with a fast and simple solution to our unique situation. We were up and running in no time with the refurbished Diamond Select Allura Xper FD20 X-ray system, which has put us on the cutting edge of technology for less.”

“I am blown away with our Diamond Select lab. The image quality is superb. The technology is just unbelievable. It feels like living in the future.”

Results

This Diamond Select solution from Philips has enabled CHRISTUS Hospital – St. Mary to take healthcare to a whole new level and get a faster return on their investment.

“With the Diamond Select Allura Xper FD20, we have been able to afford the latest technology and can now provide our patients with additional services, which we could not offer before. Our physicians love the system as they can now perform complicated studies easier and faster. Our patient volume has almost doubled. If I had to make a purchase decision over again, I would definitely go the Philips Diamond Select route again.”
