Managing workflow your way
for exceptional care
When an ECG is more than an ECG

Philips IntelliSpace ECG provides fast, easy access to ECGs from almost anywhere, anytime to enhance your workflow through extensive connectivity.

ECGs at your fingertips
Naturally you expect ECGs to be available on your local clients, but Philips delivers current and previous ECGs to you right at the point of decision — including PageWriter cardiographs, IntelliVue monitors, IntelliSpace Cardiovascular and even clinicians’ smartphones.

As open as you need it to be
Our multi-vendor support for cardiographs allows you to take full advantage of IntelliSpace ECG without incurring prohibitive switching costs. As an open solution, it stores records from non-Philips cardiographs in an XML format, making them available to your established workflow rules, and makes them fully editable using our standard tools. And with re-analysis capabilities, thanks to our industry-leading DXL Algorithm, you can even include them in your serial comparisons.

Multi-modality support
IntelliSpace ECG accepts reports from other ECG devices and systems for expanded multi-modality support. Studies are stored as PDF documents so they can become part of your routine workflow for viewing, adding summary notes and electronic signature, and exporting or printing, locally or remotely.

Standard browser compatibility
The ECG Anywhere client is compatible with HTML 5 web browsers, which are standard on most current desktop or laptop computers, and even mobile devices. This lets you access patient information, waveforms, and diagnostic reports without having to download or install proprietary software. This client even has a user interface that lets you read ECGs online, whether you are using a mouse and keyboard, or using touch and gestures on a mobile devices. It even lets you retrieve and update ECGs in Philips and non-Philips ECG repositories.
ECGs can easily be retrieved from IntelliSpace ECG and accessed from other point-of-care applications for review, comparison and printing.

Obsolescence is now obsolete
Philips offers you a scalable and innovative three-tier software architecture. This state-of-the-art solution supports high availability with options for automatic, seamless failover and load balancing for the performance you demand. Changes in capacity or increases in performance are addressed by simply adding the appropriate hardware or software module – when you need it.

Single pipe interoperability
IntelliSpace ECG uses IntelliBridge Enterprise for “single pipe” interoperability with your HIS, ADT, EMR, and other hospital informatics solutions. This same interfacing engine can be shared among Philips cardiovascular informatics solutions providing additional benefits and integration savings.

Software-only option
All IntelliSpace ECG editions are provided in a Philips-supported, software-only version for cost-effective use of existing or preferred platforms, including virtual machines.
Connecting exceptional care in a fast-moving world

Clinicians

- Review, analyze, and edit ECGs from multiple connected locations
- Access ECG data at point of decision – including from mobile devices
- Display ECGs from multiple sources
- Automatically serial compare current and previous ECGs, even from non-Philips devices
- Easily view previous ECGs for comparison
- Review and finalize Holter and Stress reports
- Set personal viewing and editing preferences

ECGs can be automatically serially compared and presented in side-by-side or stacked mode for easy viewing and editing. The ECG Waveform Scaling Tool even makes it easier for you to use calipers when measuring the high voltages commonly found in pediatric ECGs.

The print quality of this copy is not an accurate representation of the original.
Administrators

- Easily manage thousands to over one million ECGs per year, from the single site to the broad enterprise
- Grow the system as your enterprise grows
- Collect ECG records from multi-vendor devices
- Use rules-based workflow to automate tasks
- Quickly receive and reconcile networked orders
- Assign security roles by user and responsibility
- Boost department efficiency and assist in hospital initiatives with standard and customized management reports

IT Professionals

- Rely on industry-standard platforms including Windows Server® 2012, SQL Server® 2014, and Windows® 7 or Windows 8
- Use IntelliBridge Enterprise to provide single pipe communication channel for enterprise interoperability
- Optionally, take advantage of state-of-art, three-tier software architecture and blade technology for scalability, high availability, mirroring, and load balancing
- Use software-only implementation to leverage available servers, including virtual machines
- Facilitate compliance with security and privacy mandates

IntelliSpace ECG, in conjunction with mobile ECG apps and notification services, can support key Door-to-Balloon initiatives by putting time-sensitive ECGs into the hands of decision makers. The cardiologist on-call can even get an ECG Report on demand as an e-mail with a PDF attachment. It’s quick and seamless.
Workflow across your enterprise

The ECG is one of the world’s most widely prescribed diagnostic cardiology tests. Now you can take full advantage of it to improve patient care through comprehensive and flexible workflow management – throughout your enterprise.

Our open architecture lets you do more
IntelliSpace ECG uses innovative software to meet or exceed your institution’s current standards, supporting and streamlining the way you work. It allows you to easily integrate ECG information throughout your entire continuum of care, and communicate quickly using the latest networking technology to speed the flow of not only today’s ECGs, but also previous ECGs, orders and worklists, ADT demographics, and billing information.

Completely customize workflow
IntelliSpace ECG brings sophistication to workflow management. Automatically manage the flow of ECG records via rules you establish for acquisition, review, editing, final storage, report distribution, and more.

System storage expands to meet your needs
While IntelliSpace ECG provides large storage capacities in base versions, it can also expand and adapt, as required to meet your evolving needs. For example, it can partition your database into a small, active partition for recently acquired ECGs, while confirmed and infrequently accessed ECGs are archived in read-only segments. Apart from improving the performance of day-to-day ECG operations, this reduces the maintenance effort for large databases.

Access control
The system gives you control over access with comprehensive security tools to help you comply with HIPAA and 21 CFR Part 11.

Complement your EMR, CVIS or PACS
By working with our customers, we’ve designed systems that meet their evolving needs. With IntelliBridge Enterprise, you can connect seamlessly, using industry standards, with Philips and non-Philips departmental and hospital systems, while providing both the extended clinical decision support and the sophisticated workflow management expected in today’s care environment.

On PageWriter TC cardiographs, demographics and order information can be transferred to the ECG record with a single touch, reducing typing errors and supporting smooth reconciliation and EMR integration. Both orders and ADT interfaces are supported.

With IntelliSpace ECG, department users can readily view the color-coded reconciliation status of individual ECG records. The ECG reconciliation process can be streamlined.
ECGs can be acquired from a variety of ECG devices, including ambulance-based defibrillators. ECGs received are forwarded automatically based upon established workflow rules.
