

Expanding reach with Allura FC

Allura FC combines cost-effectiveness with practicality, ease-of-use, reliability and affordability

Who/where

Royal Surabaya Hospital in Indonesia. It is a multi-specialty hospital with 120 bed capacity and focuses extensively on patient care.

Challenge

The hospital was looking for a reliable cathlab at an affordable price for carrying out interventional procedures.

Solution

The Allura FC combines ease-of-use, reliability and affordability with essential functionality for diagnostics and interventions for cardiovascular diseases.

Royal Surabaya Hospital is a new establishment based in Surabaya city in Indonesia. The Royal Surabaya hospital is a multi-specialty hospital with 120 bed capacity and focuses extensively on patient care.

Dr. Yudi is the Head of Department and a visiting Interventional Cardiologist at Royal Surabaya. He and his colleague cardiologists were very happy with the image quality of Allura FC with OptIQ technology and gave a very positive feedback on the system. The system is being used for coronary diagnostic and interventional procedures.

“Looking at the system and offerings it is surpassing my expectations. In comparison with cost versus image quality and offered functions, I am really very happy with the system. Image quality is excellent and clear that we were able to see previously deployed stent comfortably. After few procedures I am confident to use this system for complex procedures too. We have performed back to back procedures without any delay or waiting between two procedures. Overall dose is also very less compared to other systems. In true sense this is a real mini Cathlab for hospital like Royal Surabaya”

HOD, Cathlab, Interventional Cardiologist, Royal Hospital, Surabaya
