Achieva 3.0T Quasar Dual

Preferred Room Layout

The layout shown below is based upon a typical equipment configuration and should be considered as a general design guideline. Site conditions, application requirements, customer preferences, and/or equipment configuration may significantly impact suite design and equipment layout. It is recommended to request site-specific drawings from a Philips representative early in the design process.

Equipment Layout

Ceiling Height Guide

Equipment Room:  
- 10' - 6" (3200mm) Recommended  
- 9' - 2" (2795mm) Minimum*

Exam Room Suspended Ceiling:  
- 8' - 3 1/4" (2520mm) Required

Exam Room RF Ceiling:  
- Helium Waveguide Through RF Wall: 10' - 6" (3200mm) Minimum*  
- Helium Waveguide Through RF Ceiling: 11' - 2 1/4" (3410mm) Minimum*

Control Room:  
- 9' - 10" (3000mm) Recommended  
- 7' - 3" (2200mm) Minimum

* Ceiling Heights outside the minimum dimensions may be possible. These Ceiling Heights must be reviewed and approved.

Environmental Requirements for General Equipment Locations

Heating, ventilation, air conditioning requirements concern all rooms (equipment room, magnet room, and control room) and must be maintained 24 hours a day, 7 days a week.

Examination Room:
- Temperature: 65° to 71° (18° to 22° C)
  - The temperature of the conditioned air that enters the room must not be less than 42° F (6° C) below the mean room temperature
- Maximum Temperature Rate of Change: 9° F (5° C) per 10 minutes
- Humidity: 40% to 70%, non-condensing
- Air Conditioning Capacity: 6800 BTU / hr (2 kW)
  - Energy dissipated in the examination room will be removed from the room by an additional air exhaust system.
  - Gradient coil heat dissipation (3400 to 51200 BTU / hr [1 to 15 kW] will be removed via liquid cooling of the gradient coil.)
  - Exam room temperature and humidity specifications are critical for the MR and must be met at all times. No exceptions are allowed.

Equipment Room:
- Temperature: 59° to 75° (15° to 24° C)
  - The temperature of the conditioned air that enters the room must not be less than 42° F (6° C) below the mean room temperature
- Maximum Temperature Rate of Change: 9° F (5° C) per 10 minutes
- Humidity: 30% to 70%, non-condensing
- Air Conditioning Capacity:
  - At Standby: 6800 BTU / hr (2 kW)
  - Peak Dissipation Scanning: 27300 BTU / hr (8 kW)

Control Room:
- Temperature: 64° to 75° (18° to 24° C)
- Maximum Temperature Rate of Change: 9° F (5° C) per 10 minutes
- Humidity: 30% to 70%, non-condensing
- Air Conditioning Capacity: 1700 BTU / hr (0.5 kW)

Power Requirements
- Supply Configuration: 3 phase, 3 wire power, unity ground, and bonded ground
- Nominal Line Voltage: 400VAC, 50/60 Hz or 480 VAC, 60 Hz
- Branch Power Requirement: 80 kVA
- Circuit Breaker: 3 pole, 100 Amps (480 VAC)

Remote Service Diagnostics

Remote Service Diagnostics - Medical imaging equipment to be installed by Philips Medical is equipped with a service diagnostic feature which allows for remote and on site service diagnostics. To establish this feature, a RJ35 type ethernet 10/100/1000 Mbit network connector must be installed as shown on plan. Access to customer's network via their remote access server is needed for Remote Service Network (RSN) connectivity. All cost with this feature are the responsibility of the customer.
