

# Simplicity is a patient monitor that can also save a life.

Sanford Hospital  
Sioux Valley, SD

## Challenge

*Before transporting patients, technicians wasted time locating monitors and defibrillators suitable for transport. Often patients needed to be re-wired before transport, interrupting data monitoring.*

## Solution

The HeartStart MRx Monitor/Defibrillator is a networked monitor with built-in defibrillation.

## Results

Technicians can transport patients without re-wiring or data interruption of patient surveillance.

*“Every transport used to begin with a scavenger hunt to find the equipment needed. Now (with the MRx) everything is in one place, all set to go.”*

*“Previously, we didn’t transport with a defib because it was just another item that had to be found, now the defib is built in.”*
