Document Number: XBS 231-060738
Date: 20 March 2007

1. DICOM CONFORMANCE STATEMENT OVERVIEW

The Ortho Workbench provides an environment for data selection, viewing and reporting, in which specific orthopedic applications can be executed. This orthopedic software package offers an opportunity to offer products directly to an orthopedic surgeon, who usually does not have a PACS or a ViewForum. The Philips Orthopaedic Applications provide evaluation and planning functionality for Orthopaedic images. They are able to read DICOM files and create Secondary Captures Images.

A table of Supported Networking DICOM Service (SOP) Classes is provided with roles (User/Provider)

The main application areas of the Philips Orthopaedic Applications are:

- Leg Osteotomy planning
- Lower extremity measurements
- Hip Implant planning
- Viewing Images
- Generate Reports in Word format by filling in a Word template.

This DICOM Conformance Statement describes the DICOM conformance of the Philips Orthopaedic Applications platform. Application packages specific DICOM conformance is described in chapter 8 in this Conformance Statement.

Table 1: Network Services

SOP Class		User of Service (SCU)	Provider of Service (SCP)
Name	UID		
Transfer			
Computed Radiography Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.1	No	Yes
Digital X-Ray Image Storage - For Pres. SOP	1.2.840.10008.5.1.4.1.1.1.1	No	Yes
Secondary Capture Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.7	Yes	Yes
Softcopy Presentation State Storage SOP Class	1.2.840.10008.5.1.4.1.1.11.1	No	Yes
X-Ray Angiographic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.1	No	Yes
X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2	No	Yes

The services can be specified as a SCU, SCP or as an Option, which means that it is either configurable or that it can be purchased separately.

A table of Supported Media Storage Application Profiles (with roles) is provided

Table 2: Media Services

Media Storage Application Profile	Write Files (FSC or FSU)	Read Files (FSR)
Compact Disk – Recordable		
General Purpose CD-R Interchange	No	Yes

8.6. PRIVATE TRANSFER SYNTAXES.....	23

3. INTRODUCTION

The introduction specifies product and relevant disclaimers as well as any general information that the vendor feels is appropriate.

3.1. Revision History

The revision history provides dates and differences of the different releases.

Table 3: Revision History

Document Version	Date of Issue	Author	Description
00	01 January 2006	PMS CTO C&S IC2	Template for the DICOM Conformance Statement (Ref. DICOM Standard PS 3.2 - Conformance)
01	30 January 2007	PMS CTO C&S IC2	Draft version of the DICOM Conformance Statements for Philips Ortho Workbench R1.2V1L2
02	05 March 2007	PMS CTO C&S IC2	Update after review.
03	20 March 2007	PMS CTO C&S IC2	Deleting of the Watermark DRAFT Final version

3.2. Audience

This Conformance Statement is intended for:

- (Potential) customers
- System integrators of medical equipment
- Marketing staff interested in system functionality
- Software designers implementing DICOM interfaces

It is assumed that the reader is familiar with the DICOM standard.

3.3. Remarks

The DICOM Conformance Statement is contained in chapter 4 through 8 and follows the contents and structuring requirements of DICOM PS 3.2.

This DICOM Conformance Statement by itself does not guarantee successful interoperability of Philips equipment with non-Philips equipment. The user (or user's agent) should be aware of the following issues:

• Interoperability

Interoperability refers to the ability of application functions, distributed over two or more systems, to work successfully together. The integration of medical devices into an IT environment may require application functions that are not specified within the scope of DICOM. Consequently, using only the information provided by this Conformance Statement does not guarantee interoperability of Philips equipment with non-Philips equipment.

It is the user's responsibility to analyze thoroughly the application requirements and to specify a solution that integrates Philips equipment with non-Philips equipment.

• Validation

Philips equipment has been carefully tested to assure that the actual implementation of the DICOM interface corresponds with this Conformance Statement.

Where Philips equipment is linked to non-Philips equipment, the first step is to compare the relevant Conformance Statements. If the Conformance Statements indicate that successful information exchange should be possible, additional validation tests will be necessary to ensure the functionality, performance, accuracy and stability of image and image related data. It is the responsibility of

the user (or user's agent) to specify the appropriate test suite and to carry out the additional validation tests.

- **New versions of the DICOM Standard**

The DICOM Standard will evolve in future to meet the user's growing requirements and to incorporate new features and technologies. Philips is actively involved in this evolution and plans to adapt its equipment to future versions of the DICOM Standard. In order to do so, Philips reserves the right to make changes to its products or to discontinue its delivery.

The user should ensure that any non-Philips provider linking to Philips equipment also adapts to future versions of the DICOM Standard. If not, the incorporation of DICOM enhancements into Philips equipment may lead to loss of connectivity (in case of networking) and incompatibility (in case of media).

3.4. Definitions, Terms and Abbreviations

DICOM definitions, terms and abbreviations are used throughout this Conformance Statement. For a description of these, see NEMA PS 3.3 and PS 3.4. The word Philips in this document refers to Philips Medical Systems.

The following acronyms and abbreviations are used in this document.

AE	Application Entity
ANSI	American National Standard Institute
AP	Application Profile
CD	Compact Disc
CD-R	CD-Recordable
CD-M	CD-Medical
CR	Computed Radiography
DICOM	Digital Imaging and Communications in Medicine
DIMSE	DICOM Message Service Element
DIMSE-C	DIMSE-Composite
DIMSE-N	DIMSE-Normalized
DX	Digital X-Ray
EBE	DICOM Explicit VR Big Endian
ELE	DICOM Explicit VR Little Endian
FSC	File-set Creator
FSR	File-set Reader
FSU	File-set Updater
GUI	Graphic User Interface
ILE	DICOM Implicit VR Little Endian
IOD	Information Object Definition
NEMA	National Electrical Manufacturers Association
PDU	Protocol Data Unit
RF	X-Ray Radiofluoroscopic
RWA	Real-World Activity
SC	Secondary Capture
SCP	Service Class Provider
SCU	Service Class User
SOP	Service Object Pair
TCP/IP	Transmission Control Protocol/ Internet Protocol
UID	Unique Identifier
XA	X-Ray Angiographic

Note that at any point in time the official standard consists of the most recent yearly edition of the base standard (currently 2007) plus all the supplements and correction items that have been approved as Final Text.

4. NETWORKING

Philips Orthopaedic Applications does not provide any DICOM networking services.

5. MEDIA INTERCHANGE

5.1. Implementation Model

The implementation model shall identify the DICOM Application Entities in a specific implementation and relate the Application Entities to Real-World Activities.

5.1.1. Application Data Flow Diagram

The Philips Orthopaedic Application consists of one single application entity only: the Philips Orthopaedic Application Application Entity.

Next figure shows the Media Interchange Application Data Flow as a functional overview of the Philips Orthopaedic Application for CD-R or DVD.

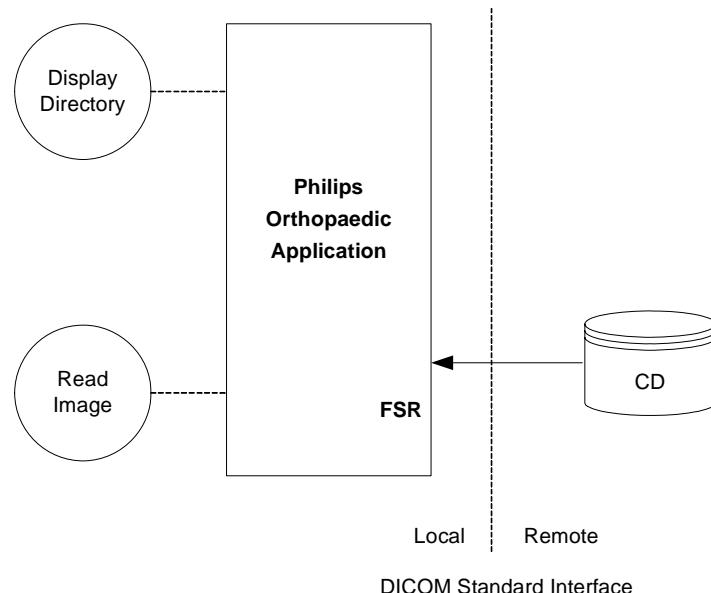

Figure 1: Application Data Flow Diagram

The next table shows the AE Related Application Profiles, Real-World Activities, and Roles for CD-R overview of the Philips Orthopaedic Application and the supporting roles for CD-R.

Table 4: Media Services table

Media Storage Application	Write Files (FSC / FSU)	Read Files (FSR)
General Purpose CD-R	NO / NO	YES

The Philips Orthopaedic Application will act as a FSR for CD-R, when reading the directory of the medium. Philips Orthopaedic Application supports the media profiles as shown in the Table below:

Table 5: Media Profiles supported by Philips Orthopaedic Application

Application Profile	CD
General Purpose	STD-GEN-CD

Supported Photometric Interpretations

The Philips Orthopaedic Application system supports images with the following DICOM Photometric Interpretations as shown in the Table below:

Table 6: Photometric interpretations supported by Philips Orthopaedic Application

Photometric Interpretation	Import	Export	Viewing
MONOCHROME1	YES	As RGB	YES
MONOCHROME2	YES	As RGB	YES
RGB	YES	As RGB	YES

5.1.2. Functional Definitions of AE's

This section shall describe in general terms the functions to be performed by the AE, and the DICOM services used to accomplish these functions.

5.1.2.1. Functional Definition of Philips Orthopaedic Application

The Philips Orthopaedic Application AE is the one and only application entity within Philips Orthopaedic Application. It includes the following service class.

Media Storage Service Class for CD

The Philips Orthopaedic Application AE can perform the CD-R Media Storage service as SCU, with capabilities for:

- Leg osteotomy planning, Hip implant planning and Lower extremity measurements
- RWA Display Directory (as FSR),
- RWA Read Images (as FSR).

5.1.3. Sequencing of Real World Activities

A CD can be read into the Philips Orthopaedic Application first by reading the DICOMDIR. The Philips Orthopaedic Application AE cannot compile the updated DICOMDIR. Any required DICOM images into a write session image is stored in file format to hard disk, memory stick or floppy disk.

5.1.4. File Meta Information for Implementation Class and Version

This section shall be used to list the values assigned to the File Meta Information attributes (ref. [DICOM] PS 3.10) that pertain to the Implementation Class and Version.

The Implementation Class UID and the Implementation Version Name in the File Meta Header are as specified for Philips Orthopaedic Application

Table 7: DICOM Implementation Class and Version for Philips Orthopaedic Application

Implementation Class and Version

File Meta Information Version	00, 01
Implementation Class UID	1.3.46.670589.5.4.2
Implementation Version Name	Ortho R 1.2V1L2

5.2. AE Specifications

The next section in the DICOM Conformance Statement contains the specification of the one and only Philips Orthopaedic Application Application Entity: Philips Orthopaedic Application AE

5.2.1. Philips Orthopaedic Application AE - Specification

The next section in the DICOM Conformance Statement contains the specification of the one and only Philips Orthopaedic Application Application Entity: Philips Orthopaedic Application AE

The Philips Orthopaedic Application AE provides Standard Conformance to the DICOM Media Storage Service and File Format ([DICOM] PS 3.10), the Media Storage Application Profiles STD-GEN-CD ([DICOM] PS 3.11)

Philips Orthopaedic Application supports multi-patient and multi-session CD-R disks, for Reading.

Supported media by Philips Orthopaedic Application is CD R / CD RW with the profile: STD-GEN-CD.

The supported Application Profiles, their Roles and the Service Class (SC) options, all defined in DICOM terminology, are listed in Table 8.

Table 8: AE Related Application Profiles, Real-World Activities, and Roles for CD-R

Supported Application Profile	Real-World Activity	Roles	SC Option
STD-GEN-CD	Display Directory	FSR	Interchange
	Read Images	FSR	Interchange

Only adding on instances is supported for the FSU, deleting is not supported.

5.2.1.1. File Meta Information for the Philips Orthopaedic Application

The Source Application Entity Title is configurable.

5.2.1.2. Real-World Activities

5.2.1.2.1. Display Directory

When a database open action is initiated on the CD-R then the Philips Orthopaedic Application acts as an FSR using the interchange option to read the DICOMDIR of the CD-R medium.

This will result in an overview of the patients, studies, series and images on the Philips Orthopaedic Application screen.

5.2.1.2.1.1. Media Storage Application Profile

The Philips Orthopaedic Application supports the RWA Display Directory for the STD-GEN-CD Application Profile.

5.2.1.2.2. Write Images

When an image transfer to hard disk is initiated then the Philips Orthopaedic Application acts as an FSC or FSU using the interchange option to export SOP Instances from to the local database or file medium.

5.2.1.2.2.1. Media Storage Application Profile

The Philips Orthopaedic Application supports the RWA Write Images function by sending these images to the local hard disk, memory disk or floppy disk.

6. SUPPORT OF CHARACTER SETS

Any support for character sets beyond the default character repertoire in Network and Media services shall be described here.

Table 9: Supported DICOM Character Sets of Ortho Workbench

8. ANNEXES OF APPLICATION "PHILIPS ORTHOPAEDIC APPLICATIONS"

8.1. IOD Contents

8.1.1. Created SOP Instance

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

ALWAYS	The module is always present
CONDITIONAL	The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

ALWAYS	The attribute is always present with a value
EMPTY	The attribute is always present without any value (attribute sent zero length)
VNAP	The attribute is always present and its Value is Not Always Present (attribute sent zero length if no value is present)
ANAP	The attribute is present under specified condition – if present then it will always have a value
ANAPCV	The attribute is present under specified condition – if present then its Value is Not Always Present (attribute sent zero length if condition applies and no value is present)
ANAPEV	The attribute is present under specified condition – if present then it will not have any value

The abbreviations used in the Module table for the column "Source" are:

AUTO	The attribute value is generated automatically
CONFIG	The attribute value source is a configurable parameter
COPY	The attribute value source is another SOP instance
FIXED	The attribute value is hard-coded in the application
IMPLICIT	The attribute value source is a user-implicit setting
MPPS	The attribute value is the same as that use for Modality Performed Procedure Step
MWL	The attribute value source is a Modality Worklist
USER	The attribute value source is explicit user input

8.1.2. Usage of Attributes from Received IOD

The following table defines the requirement per functionality:

- Type 1 This functionality requires all DICOM mandatory attributes
- Optional This functionality requires DICOM optional attributes as specified in related subsection including the DICOM mandatory attributes.
- Private This functionality requires private attributes, including DICOM mandatory and DICOM optional attributes.

The Philips Orthopaedic Application system supports the DICOM image SOP Classes as mentioned in the following table:

Table 23: Functionalities

Functionality	Type1	Optional	Private
Leg Osteotomy planning		X	
Lower extremity measurements		X	
Hip implant planning		X	
Viewing		X	

8.1.2.1. Usage of the Functionality Leg Osteotomy planning

The Leg Osteotomy application supports the following SOP classes

Table 24: Supported SOP Classes for functionality Leg Osteotomy planning

SOP Class name	SOP Class UID
Computed Radiography Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.1
Digital X-Ray Image Storage - For Pres. SOP	1.2.840.10008.5.1.4.1.1.1.1
X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2
X-Ray Angiographic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.1

Table 25: Supported Optional attributes of functionality Leg Osteotomy planning

Attribute Name	Tag	VR	Value	Comment
Patient's Name	0010,0010	PN		
Patient ID	0010,0020	LO		
Patient's Birth Date	0010,0030	DA		
Patient's Sex	0010,0040	CS		
Study Date	0008,0020	DA		
Referring Physician's Name	0008,0090	PN		
Study Description	0008,1030	LO		
Pixel Data	7FE0,0010	O W/ OB		
Pixel Aspect Ratio	0028,0034	IS		
SOP Class UID	0008,0016	UI		
Number of Frames	0028,0008	IS		

8.1.2.2. Usage of the Functionality Lower extremity measurements

The Lower extremity measurements application supports the following SOP classes.

Table 26: Supported SOP Classes for functionality Lower extremity measurements

SOP Class name	SOP Class UID
Computed Radiography Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.1
Digital X-Ray Image Storage - For Pres. SOP	1.2.840.10008.5.1.4.1.1.1.1
X-Ray Angiographic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.1
X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2

Table 27: Supported Optional attributes of functionality Lower extremity measurements

Attribute Name	Tag	VR	Value	Comment
Patient's Name	0010,0010	PN		
Patient ID	0010,0020	LO		
Patient's Birth Date	0010,0030	DA		
Patient's Sex	0010,0040	CS		
Study Date	0008,0020	DA		
Referring Physician's Name	0008,0090	PN		
Study Description	0008,1030	LO		
Pixel Data	7FE0,0010	O W/ OB		
Pixel Aspect Ratio	0028,0034	IS		
SOP Class UID	0008,0016	UI		
Number of Frames	0028,0008	IS		

8.1.2.3. Usage of the Functionality Hip implant planning

The Hip implant planning application supports the following SOP classes.

Table 28: Supported SOP Classes for functionality Hip implant planning

SOP Class name	SOP Class UID
Computed Radiography Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.1
Digital X-Ray Image Storage - For Pres. SOP	1.2.840.10008.5.1.4.1.1.1.1
X-Ray Angiographic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.1
X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2

Table 29: Supported Optional attributes of functionality Hip implant planning

Attribute Name	Tag	VR	Value	Comment
Patient's Name	0010,0010	PN		
Patient ID	0010,0020	LO		
Patient's Birth Date	0010,0030	DA		
Patient's Sex	0010,0040	CS		
Study Date	0008,0020	DA		
Referring Physician's Name	0008,0090	PN		
Study Description	0008,1030	LO		
Pixel Data	7FE0,0010	O W/ OB		
Pixel Aspect Ratio	0028,0034	IS		
SOP Class UID	0008,0016	UI		
Number of Frames	0028,0008	IS		

8.1.2.4. Usage of the Functionality Viewing

The viewing application supports the following SOP classes.

Table 30: Supported SOP Classes for functionality Viewing

SOP Class name	SOP Class UID
Computed Radiography Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.1
Digital X-Ray Image Storage - For Pres. SOP	1.2.840.10008.5.1.4.1.1.1.1
Secondary Capture Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.7
X-Ray Angiographic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.1
X-Ray Radiofluoroscopic Image Storage SOP Class	1.2.840.10008.5.1.4.1.1.12.2
Softcopy Presentation State Storage SOP Class	1.2.840.10008.5.1.4.1.1.11.1

Table 31: Supported Optional attributes of functionality Viewing

Attribute Name	Tag	VR	Value	Comment
Patient's Name	0010,0010	PN		
Patient ID	0010,0020	LO		
Patient's Birth Date	0010,0030	DA		
Patient's Sex	0010,0040	CS		
Study Date	0008,0020	DA
