

IntelliVue to go

IntelliVue MX40 wearable patient monitor

PHILIPS
sense and simplicity

Freedom of movement

Real time, real mobility

Get ready to go. You've never seen anything like the Philips IntelliVue MX40, which combines the benefits of IntelliVue patient monitoring and telemetry into a single, compact wearable monitor. With continuous ECG monitoring and optional pulse oximetry, the IntelliVue MX40 keeps progressive care patients of various acuity levels monitored wherever they go within the hospital.

IntelliVue through and through

The device is harmonized with the rest of the IntelliVue family for ease of training and use. The IntelliVue Information Center is an integral part of the IntelliVue MX40 solution.

Simple identification verification

Proper patient and equipment identification is essential. Patient demographic information is displayed to make sure the IntelliVue MX40 is assigned to the right patient, providing a valuable verification check after admission to the IntelliVue Information Center.

More in touch

Just a single touch of this color screen and you can view a wide variety of measurements at a patient's side. It incorporates the benefits of the advanced technology, intelligent design, and innovative features you expect from Philips in a device that is light enough and small enough to be comfortably worn by your ambulatory patients. Respond to and verify alarms, or maintain a calm, quiet environment. Choose screen formats that work for you and your institution. With the IntelliVue MX40, it's easy.

Get personal

IntelliVue MX40 incorporates the benefits of the advanced technology, intelligent design, and innovative features you expect from Philips in a device light enough and small enough to be comfortably worn by your ambulatory patients.

Viewing information at the patient's side gives every caregiver access to the most current patient status to help enhance care.

Color touch screen display.

Automatic “sleep” mode to conserve battery while maintaining privacy.

View patient status with a **single touch**.

Two channels of **real-time waveforms**.

Four screen formats.

Screen orientation choice for easy clinical assessment.

Flexible monitoring parameters.

Wide variety of measurements including ECG, SpO₂, blood pressure.

Disposable or rechargeable batteries.

Battery status displayed on device and the IntelliVue Information Center.

The color touchscreen display "sleeps" to conserve battery life and provide patient privacy, yet can be activated with the touch of a button to allow viewing by caregivers.

Alarms when you need them

Appropriate alarming for your environment

The IntelliVue MX40 displays alarms for ECG, SpO₂, and non-invasive blood pressure. Clinicians can respond to and verify alarms or maintain a calm, quiet environment for the patient. This flexibility supports alarm management policies suited to various clinical environments, without the need for additional equipment.

Add measurements without adding cables

The IntelliVue MX40 monitor offers the clinical and technical advances to help you streamline workflow and enhance care, while allowing your patients the freedom to roam. By connecting via short-range radio technology to IntelliVue Cableless Measurements, you can add non-invasive blood pressure or pulse oximetry without the hassle of additional cables and tripping hazards.

Just one touch

With just a single touch, you can view current alarm settings, alarm histories, vitals trends, or activate the monitor from “sleep” mode.

Supports your goals

IntelliVue MX40 helps support your efforts to reduce cross-contamination and supports green initiatives.

Reducing the risk of HAI

The IntelliVue MX40 was designed with cleaning and infection prevention in mind. It begins with a unique external connector that reduces collection of soil and liquids. The device itself is smooth, allowing easy wiping, while the case material supports cleaning by a variety of standard low- to high-level disinfectants, including periodic sterilization. Philips offers reusable lead sets to meet hospital needs.

Sustainable

The device also provides a flexible battery choice: disposable AA batteries or a rechargeable lithium ion battery. Using rechargeable lithium ion batteries reduces overall landfill waste caused by disposable batteries, which helps to support a greener environment. Choosing lithium ion batteries also allows you to reduce the added cost of purchasing batteries.

The IntelliVue MX40 is water tight (to IPX7) and able to withstand accidental water immersion, showering, and cleaning.
