# **1. DICOM Conformance Statement Overview**

This version of the DICOM Conformance Statement applies to the "Ingenuity CT family" scanners running on the iPatient (4.x) platform.

The iPatient (4.x) platform is optional available for the Ingenuity Core<sup>128</sup> and Ingenuity Core CT scanners.

Henceforth, in this document "Ingenuity CT family" is referred as "Ingenuity CT".

The Ingenuity CT scanner provides the following DICOM data exchange features:

- Store DICOM Images sent from a Workstation or PACS
- Transfer DICOM Images to a Workstation or PACS
- Query/Retrieve a Workstation or PACS for a list of entries representing Series of DICOM Images
- Query/Retrieve support to let a remote system query for a list of entries representing Series of DICOM Images
- Query a HIS/RIS for a MWL
- Update a remote system with information about Performed Procedure Steps (MPPS)
- Store DICOM Images on portable media (CD, CD-RW, DVD+/-R and DVD+/-RW disks)
- Read DICOM Images from a portable media
- Print Images (Grayscale and Color) on a DICOM Printer

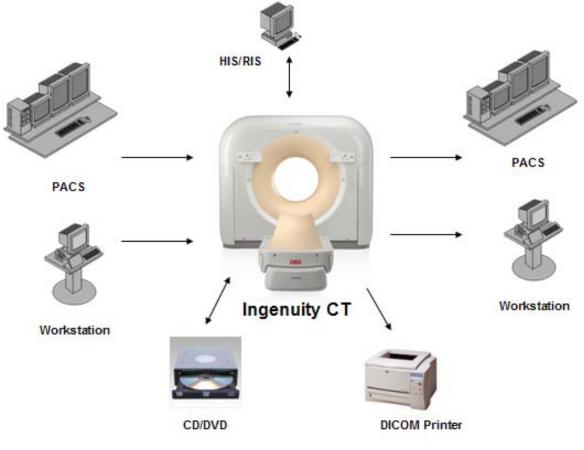

Figure 1: Ingenuity CT in a workflow

The following Table presents an overview of all network services and the applicable SOP Classes as provided by the Ingenuity CT scanner, where the first column specifies the used SOP Classes as named in PS 3.6 (Ref PS 3.2 Annex A) of the current DICOM Standard.

#### **Table 1: Network Services**

| SOP Class  |                               | User of          | Provider            |
|--|-------------------------------|------------------|---------------------|
| Name   | UID                           | Service<br>(SCU) | of Service<br>(SCP) |
|  | Other                         |                  |                     |
| Verification SOP Class                               | 1.2.840.10008.1.1             | Yes              | Yes                 |
|  | Print Management              |                  |                     |
| Basic Color Print Management Meta SOP Class          | 1.2.840.10008.5.1.1.18        | Yes              | No                  |
| >Basic Film Session SOP Class                        | 1.2.840.10008.5.1.1.1         | Yes              | No                  |
| Basic Grayscale Print Management Meta SOP Class      | 1.2.840.10008.5.1.1.9         | Yes              | No                  |
| >Basic Film Session SOP Class                        | 1.2.840.10008.5.1.1.1         | Yes              | No                  |
|  | Query/Retrieve                |                  |                     |
| Study Root QR Information Model - FIND SOP Class     | 1.2.840.10008.5.1.4.1.2.2.1   | Yes              | Yes                 |
| Study Root QR Information Model - MOVE SOP Class     | 1.2.840.10008.5.1.4.1.2.2.2   | Yes              | Yes                 |
|  | Transfer                      |                  |                     |
| Computed Radiography Image Storage SOP Class         | 1.2.840.10008.5.1.4.1.1.1     | Yes              | Yes                 |
| Digital X-Ray Image Storage - For Pres. SOP          | 1.2.840.10008.5.1.4.1.1.1.1   | Yes              | Yes                 |
| Digital X-Ray Image Storage - For Proc. SOP          | 1.2.840.10008.5.1.4.1.1.1.1.1 | Yes              | Yes                 |
| X-Ray Angiographic Image Storage SOP Class           | 1.2.840.10008.5.1.4.1.1.12.1  | Yes              | Yes                 |
| X-Ray Radiofluoroscopic Image Storage SOP Class      | 1.2.840.10008.5.1.4.1.1.12.2  | Yes              | Yes                 |
| CT Image Storage SOP Class                           | 1.2.840.10008.5.1.4.1.1.2     | Yes              | Yes                 |
| Secondary Capture Image Storage SOP Class            | 1.2.840.10008.5.1.4.1.1.7     | Yes              | Yes                 |
| X-Ray Radiation Dose SR                              | 1.2.840.10008.5.1.4.1.1.88.67 | Yes              | Yes                 |
| General ECG Waveform Storage SOP Class               | 1.2.840.10008.5.1.4.1.1.9.1.2 | Yes              | Yes                 |
| Wa   | orkflow Management            |                  |                     |
| Modality Worklist Information Model - FIND SOP Class | 1.2.840.10008.5.1.4.31        | Yes              | No                  |
| Modality Performed Procedure Step SOP Class          | 1.2.840.10008.3.1.2.3.3       | Yes              | No                  |
| Storage Commitment Push Model SOP Class              | 1.2.840.10008.1.20.1          | Yes              | No                  |

**Notes:** Normally the system (SCU) requests only supported DICOM objects. All SOP Classes support the default ILE Transfer Syntax. IAll transfer Syntaxes are configurable in LAN Config.

Not supported is JPEG transfer syntax for all SOP classes if the IODs have no pixel data and for all non storage SOP classes. For media the Ingenuity CT supports:

- FSC service for CD-R, CD-RW, DVD + R, DVD - R, DVD + RW, DVD - RW media

- FSR service for CD-R, CD-RW, DVD + R, DVD - R, DVD + RW, DVD - RW media

After data is written to DVD, the DVD is finalized; the finalized DVD can now be read on mostly every DVD reader.

All the Media Services supported by Ingenuity CT are shown in the next table.

#### **Table 2: Media Services**

| Media Storage Application Profile | File-set<br>Creator<br>(FSC) | File-set<br>Updater<br>(FSU) | File-set<br>Reader<br>(FSR) |
|-----------------------------------|------------------------------|------------------------------|-----------------------------|
| Compact Disk-Recordable           |                              |                              |                             |
| CT/MR Studies on CD-R             | Yes                          | No                           | Yes                         |

| Media Storage Application Profile         | File-set<br>Creator<br>(FSC) | File-set<br>Updater<br>(FSU) | File-set<br>Reader<br>(FSR) |
|---|------------------------------|------------------------------|-----------------------------|
| General Purpose CD-R Interchange          | Yes                          | No                           | Yes                         |
| DVD                                       |                              |                              |                             |
| CT/MR Studies on DVD Media                | Yes                          | No                           | Yes                         |
| General Purpose DVD Interchange with JPEG | Yes                          | No                           | Yes                         |

# **3. Introduction**

The introduction specifies product and relevant disclaimers as well as any general information that the vendor feels is appropriate.

# 3.1. Revision History

The revision history provides dates and differences of the different releases.

**Table 3: Revision History** 

| Document<br>Version | Date of Issue    | Description   |
|---------------------|------------------|---|
| 00                  | 01-December-2011 | Initial version   |
| 01                  | 04-October-2012  | Section 8.3.2 updated with X-RAY DOSE SR template details |
| 02                  | 03-December-2012 | Document updated with review comments                     |

# 3.2. Audience

This Conformance Statement is intended for:

- (Potential) customers
- System integrators of medical equipment
- Marketing staff interested in system functionality
- Software designers implementing DICOM interfaces

It is assumed that the reader is familiar with the DICOM standard.

## 3.3. Remarks

The DICOM Conformance Statement is contained in chapter 4 through 8 and follows the contents and structuring requirements of DICOM PS 3.2.

This DICOM Conformance Statement by itself does not guarantee successful interoperability of Philips equipment with non-Philips equipment. The user (or user's agent) should be aware of the following issues:

#### • Interoperability

Interoperability refers to the ability of application functions, distributed over two or more systems, to work successfully together. The integration of medical devices into an IT environment may require application functions that are not specified within the scope of DICOM. Consequently, using only the information provided by this Conformance Statement does not guarantee interoperability of Philips equipment with non-Philips equipment.

It is the user's responsibility to analyze thoroughly the application requirements and to specify a solution that integrates Philips equipment with non-Philips equipment.

#### Validation

Philips equipment has been carefully tested to assure that the actual implementation of the DICOM interface corresponds with this Conformance Statement.

Where Philips equipment is linked to non-Philips equipment, the first step is to compare the relevant Conformance Statements. If the Conformance Statements indicate that successful information exchange should be possible, additional validation tests will be necessary to ensure the functionality, performance, accuracy and stability of image and image related data. It is the responsibility of the user (or user's agent) to specify the appropriate test suite and to carry out the additional validation tests.

#### • New versions of the DICOM Standard

The DICOM Standard will evolve in future to meet the user's growing requirements and to incorporate new features and technologies. Philips is actively involved in this evolution and plans to adapt its equipment to future versions of the DICOM Standard. In order to do so, Philips reserves the right to make changes to its products or to discontinue its delivery. The user should ensure that any non-Philips provider linking to Philips equipment also adapts to future versions of the DICOM Standard. If not, the incorporation of DICOM enhancements into Philips equipment may lead to loss of connectivity (in case of networking) and incompatibility (in case of media).

# **3.4.** Definitions, Terms and Abbreviations

## Table 4: Definitions, Terms and Abbreviations

| Abbreviation/Term | Explanation   |
|-------------------|---|
| AE                | Application Entity                                  |
| ANSI              | American National Standard Institute                |
| AP                | Application Profile                                 |
| BOT               | Basic Offset Table                                  |
| CD                | Compact Disc  |
| CD-R              | CD-Recordable                                       |
| CD-M              | CD-Medical  |
| CR                | Computed Radiography                                |

Note that at any point in time the official standard consists of the most recent yearly edition of the base standard (currently 2011) plus all the supplements and correction items that have been approved as Final Text.

# 4. Networking

This section contains the networking related services (vs. the media related ones).

# 4.1. Implementation model

The implementation model consists of three sections:

- The application data flow diagram, specifying the relationship between the Application Entities and the "external world" or Real-World Activities,
- A functional description of each Application Entity, and
- The sequencing constraints among them.

## 4.1.1. Application Data Flow

The Ingenuity CT system implements and provides DICOM services using the following Application Entities:

- DICOM-Manager
- Print-Manager

The Ingenuity CT scanner system consists of two Application Entities. The following figure shows the Networking application data flow as a functional overview of the Ingenuity CT scanner. As depicted in the Figure, the Ingenuity CT scanner incorporates the following functionality.

- After RWA Create and Set Modality Performed Procedure Step, the Ingenuity CT scanner as SCU uses the MPPS Service Class to report the modality performed procedure step.
- After operator RWA Request Modality Worklist, the Ingenuity CT scanner as SCU uses the Basic WorklistManagement Service Class to request the worklist from a DICOM Radiology information system (RIS).
- After RWA Request Verification, the Ingenuity CT scanner as SCP provides standard Verification Service Class functionality to the requesting SCU.
- After RWA Import Images, the Ingenuity CT scanner as SCP provides standard Storage Service Class functionality to the requesting SCU.
- After RWA Query Local Images/Retrieve Local Images, the Ingenuity CT scanner as SCP provides standard Query/Retrieve Service Class functionality to the requesting SCU.
- After RWA Export Images (triggered by either the operator or RWA Retrieve Local Images), the Ingenuity CT scanner as SCU uses the Remote SCP Storage Service Class functionality to store Local Images on a Remote Database.
- After operator RWA Find Remote Images, the Ingenuity CT scanner as SCU uses the remote SCP Query/Retrieve Service Class functionality to query remote images.
- After operator RWA Move Remote Images, the Ingenuity CT scanner as SCU uses the remote SCP Query/Retrieve Service Class functionality to retrieve remote images.
- After operator RWA Request Storage Commitment, the Ingenuity CT scanner as SCU uses the remote SCP Storage Commitment Service Class functionality to commit remote images.
- After operator RWA Print Images, the Ingenuity CT scanner as SCU uses the remote Print Management Service Class to print local images.

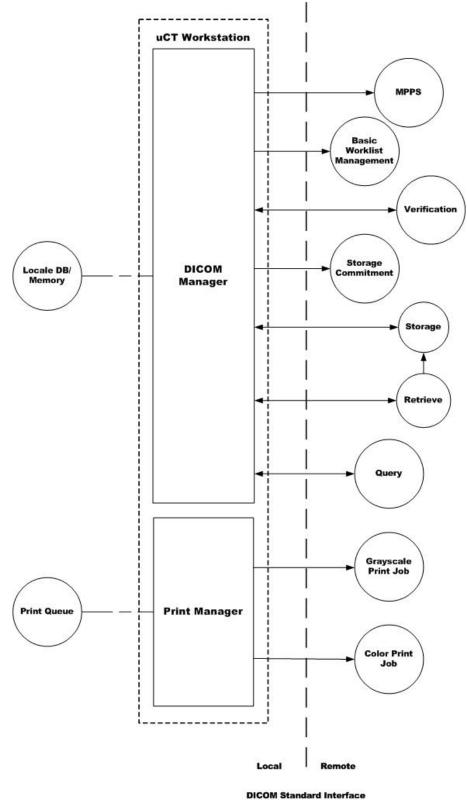

Figure 2: Network Data Flow Diagram

## 4.1.2. Functional Definition of AE's

This section contains a functional definition for each individual local Application Entity.

#### 4.1.2.1. Functional Definition of DICOM Manager

The DICOM Manager includes the following service classes:

#### Storage Service

When performing a Storage Service Class (SCP), the DICOM Manager will receive images and store them into the system's local database. The same AE may be used (with a configurable different AE title) to access the local CD/DVD or different local hard disk folders.

#### Storage Commitment Service

The DICOM Manager is responsible to issue and support the storage commitment service as SCU.

The DICOM Manager establishes association with the specified AE title and sends storage commitment (N-ACTION) request using the push model. After that, it may accept storage commitment (N-EVENT-REPORT) requests on the same association or by establishing another association.

#### **Query-Retrieve Service**

The DICOM Manager waits for another application to connect at the presentation address configured for its AE title. The DICOM Manager will accept associations with Presentation Contexts for Service Object Pair (SOP) classes for

- Storage Service Classes (C-STORE)
- Query-Retrieve Service Class (C-MOVE and C-FIND only)
- Verification Service Classes.

When performing Query-Retrieve Service Class (C-FIND SCP), the DICOM Manager will query its local database according to the request's parameters, and will send the results to the issuer.

When performing Query-Retrieve Service Class (C-MOVE SCP), the DICOM Manager will issue a C-STORE (SCU) to the target AE for every image found according to the request.

#### **Import Service**

Imported data object received from an external system will be inserted into the local data base with all the original attributes (including private), except those that jeopardize database integrity or further processing by applications.

#### **Export Service**

When an object is exported from the local database to an external device, the attributes will be preserved unless an Export Converter is applied.

#### MPPS / MWL

The DICOM Manager allows the Ingenuity CT scanner software to communicate with a remote HIS/RIS system (as SCU) for the scheduled study information. The DICOM Manager gets requests from the Study program responsible for carrying out the whole scanning procedure, and reports the study start/finish conditions back to HIS/RIS.

The server translates these internal requests into DICOM Modality Worklist Management and MPPS Services Class commands.

The DICOM Manager can perform the following activities:

- Establish an association with a remote AE.
- Release an association with a remote AE.
- Issue a C-FIND request to get Modality Worklist Management scheduling information.
- Issue N-CREATE and N-SET requests to notify HIS/RIS by means of MPPS Service Class.

#### 4.1.2.2. Functional Definition of Print Manager

The Print-Manager is a Graphical User Interface (GUI) based application. It enables the user to print predefined images using the DICOM protocol. The user can specify as a printing destination one of several predefined printers. The user can also modify some of the printing parameters such as the film size and format.

## 4.1.3. Sequencing of Real World Activities

This section contains description of specific sequencing as well as potential constraints of Real-World Activities, including any applicable user interactions, as performed by the DICOM Manager.

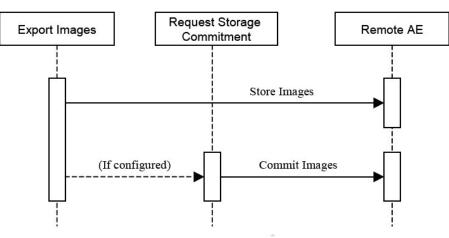

Figure 3: RWA Sequencing for Export Images

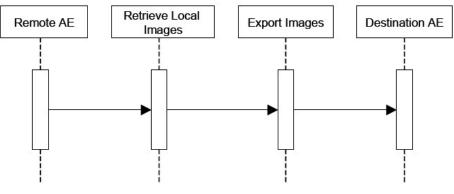

Figure 4: RWA Sequencing for Retrieve Local Images

## 4.2. AE Specifications

This section in the DICOM Conformance Statement is a set of Application Entity specifications. There are as many of these subsections as there are different AE's in the implementation.

## 4.2.1. DICOM Manager

Detail of this specific Application Entity is specified in this section.

#### 4.2.1.1. SOP Classes

This Application Entity provides Standard Conformance to the following SOP Classes.

#### Table 5: SOP Classes for DICOM Manager

| SOP Class Name                                       | SOP Class UID                 | SCU | SCP |
|--|-------------------------------|-----|-----|
| Verification SOP Class                               | 1.2.840.10008.1.1             | Yes | Yes |
| Storage Commitment Push Model SOP Class              | 1.2.840.10008.1.20.1          | Yes | No  |
| Modality Performed Procedure Step SOP Class          | 1.2.840.10008.3.1.2.3.3       | Yes | No  |
| Computed Radiography Image Storage SOP Class         | 1.2.840.10008.5.1.4.1.1.1     | Yes | Yes |
| Digital X-Ray Image Storage - For Pres. SOP          | 1.2.840.10008.5.1.4.1.1.1.1   | Yes | Yes |
| Digital X-Ray Image Storage - For Proc. SOP          | 1.2.840.10008.5.1.4.1.1.1.1.1 | Yes | Yes |
| X-Ray Angiographic Image Storage SOP Class           | 1.2.840.10008.5.1.4.1.1.12.1  | Yes | Yes |
| X-Ray Radiofluoroscopic Image Storage SOP Class      | 1.2.840.10008.5.1.4.1.1.12.2  | Yes | Yes |
| CT Image Storage SOP Class                           | 1.2.840.10008.5.1.4.1.1.2     | Yes | Yes |
| Secondary Capture Image Storage SOP Class            | 1.2.840.10008.5.1.4.1.1.7     | Yes | Yes |
| X-Ray Radiation Dose SR                              | 1.2.840.10008.5.1.4.1.1.88.67 | Yes | Yes |
| General ECG Waveform Storage SOP Class               | 1.2.840.10008.5.1.4.1.1.9.1.2 | Yes | Yes |
| Study Root QR Information Model - FIND SOP Class     | 1.2.840.10008.5.1.4.1.2.2.1   | Yes | Yes |
| Study Root QR Information Model - MOVE SOP Class     | 1.2.840.10008.5.1.4.1.2.2.2   | Yes | Yes |
| Modality Worklist Information Model - FIND SOP Class | 1.2.840.10008.5.1.4.31        | Yes | No  |

**Note:** Any SOP specific behavior is documented later in the conformance statement in the applicable SOP specific conformance section.

#### 4.2.1.2. Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

With incoming association requests the system allows acceptance of a range of defined IP addresses which is configurable in the LanConfig application.

#### 4.2.1.2.1. General

The DICOM standard application context has specified.

 Table 6: DICOM Application Context

| Description              | Value                 |
|--------------------------|-----------------------|
| Application Context Name | 1.2.840.10008.3.1.1.1 |

#### 4.2.1.2.2. Number of Associations

#### Table 7: Number of associations as an Association Initiator for this AE

| Description                                 | Value     |
|---|-----------|
| Maximum number of simultaneous associations | Unlimited |
|   |           |

## Table 8: Number of associations as an Association Acceptor for this AE

| Description                                 | Value     |
|---|-----------|
| Maximum number of simultaneous associations | Unlimited |

#### 4.2.1.2.3. Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

#### Table 9: Asynchronous nature as an Association Initiator for this AE

|    | Description  | Value |
|----|--|-------|
| Ma | aximum number of outstanding asynchronous transactions | 1     |

#### 4.2.1.2.4. Implementation Identifying Information

The value supplied for Implementation Class UID and version name are documented here.

#### Table 10: DICOM Implementation Class and Version for DICOM Manager

| Implementation Class UID    | 1.3.46.670589.33.1.1 |
|-----------------------------|----------------------|
| Implementation Version Name | BRCONN_4.0           |

#### 4.2.1.2.5. Communication Failure Handling

The behavior of the AE during communication failure is summarized in next table.

#### **Table 11: Communication Failure Behavior**

| Exception           | Behavior  | Comment                        |
|---------------------|---|--------------------------------|
| ARTIM Timeout       | The system stops the ARTIM timer and closes the transport connection. | Configurable, minimum value=1. |
| Association Timeout | A release request is sent in order to close the association.          | Configurable, minimum value=1. |

#### 4.2.1.3. Association Initiation Policy

The Application Entity will respond to a received Association rejection as shown in the next table.

#### **Table 12: Association Rejection response**

| Result                     | Source | Reason/Diagnosis                              | Explanation               |
|----------------------------|--------|---|---------------------------|
| 1 - rejected-<br>permanent |        | 1 - no-reason-given                           | The connection is closed. |
|                            |        | 2 - application-context-name-not<br>supported | The connection is closed. |
|                            |        | 3 - calling-AE-title-not-recognized           | The connection is closed. |
|                            |        | 7 - called-AE-title-not-recognized            | The connection is closed. |

| Result                     | Source  |  | Reason/Diagnosis                               | Explanation               |
|----------------------------|---|--|--|---------------------------|
|                            | 2 - DICOM UL service-provider (ACSE related function)           |  | 1 - no-reason-given                            | The connection is closed. |
|                            |   |  | 2 - protocol-version-not-supported             | The connection is closed. |
|                            | 3 - DICOM UL service-provider(Presentation related<br>function) |  | 1 - temporary-congestion                       | The connection is closed. |
|                            |   |  | 2 - local-limit-exceeded                       | The connection is closed. |
| 2 - rejected-<br>transient | 1 - DICOM UL service-user                                       |  | 1 - no-reason-given                            | The connection is closed. |
|                            |   |  | 2 - application-context-name-not-<br>supported | The connection is closed. |
|                            |   |  | 3 - calling-AE-title-not-recognized            | The connection is closed. |
|                            |   |  | 7 - called-AE-title-not-recognized             | The connection is closed. |
|                            | 2 - DICOM UL service-provider (ACSE relate<br>function)         |  | 1 - no-reason-given                            | The connection is closed. |
|                            |   |  | 2 - protocol-version-not-supported             | The connection is closed. |
|                            | 3 - DICOM UL service-provider (Presentation related function)   |  | 1 - temporary-congestion                       | The connection is closed. |
|                            |   |  | 2 - local-limit-exceeded                       | The connection is closed. |

The behavior of the AE on receiving an association abort is summarized in next table.

#### **Table 13: Association Abort Handling**

| Source  | Reason/Diagnosis                | Behavior                  |
|---|---------------------------------|---------------------------|
| 0 - DICOM UL service-user (initiated abort)     | 0 - reason-not-specified        | The connection is closed. |
| 2 - DICOM UL service-provider (initiated abort) | 0 - reason-not-specified        | The connection is closed. |
|   | 1 - unrecognized-PDU            | The connection is closed. |
|   | 2 - unexpected-PDU              | The connection is closed. |
|   | 4 - unrecognized-PDU parameter  | The connection is closed. |
|   | 5 - unexpected-PDU parameter    | The connection is closed. |
|   | 6 - invalid-PDU-parameter value | The connection is closed. |

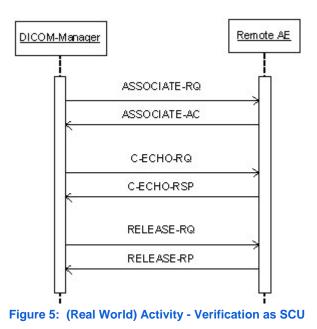

The behavior of the AE for sending an association abort is summarized in next table.

#### **Table 14: DICOM Association Abort Policies**

| Source                               | Reason/Diagnosis             | Behavior  |
|--------------------------------------|------------------------------|---|
| 0 - DICOM<br>UL service-<br>user     | 0 - reason-not-<br>specified | When the system tries to disconnect before receiving an association accept but after sending association request; When receiving association accept with no presentation context item; When receiving association accept where all items in the presentation context item list are not accepted by remote system; When an association timeout (configurable per remote device) expired (timeout which determines how long to keep an idle association); When receiving a PDU whose size is bigger than the agreed max PDU size. |
| 2 - DICOM<br>UL service-<br>provider | 1- unrecognized-<br>PDU      | Whenever the system receives unexpected or unrecognized PDU (according to the DICOM UPPER LAYER PROTOCOL STATE TRANSITION TABLE in chapter 8 of the DICOM standard).  |
| Other                                | Other                        | Not applicable.   |

#### 4.2.1.3.1. (Real-World) Activity – Verification as SCU

#### 4.2.1.3.1.1. Description and Sequencing of Activities

DICOM Manager initiates an association when the user points to one of the icons in the devices tool-bar in the UI, clicks the right mouse button and selects "Verify Connection" operation.

#### 4.2.1.3.1.2. Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association. The association will be closed immediately upon receiving the response.

The presentation contexts proposed by DICOM Manager for (Real-World) Activity - Verification as SCU are defined in the following table.

#### Table 15: Proposed Presentation Contexts for (Real-World) Activity – Verification as SCU

|                        | Present           | ation Context Table       |                     | _            |             |
|------------------------|-------------------|---------------------------|---------------------|--------------|-------------|
| Abstract Syntax        |                   | Transfer Syntax           |                     | <b>D</b> ata | Extended    |
| Name                   | UID               | Name List                 | UID List            | Role         | Negotiation |
| Verification SOP Class | 1.2.840.10008.1.1 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCU          | None        |
|                        |                   | Implicit VR Little Endian | 1.2.840.10008.1.2   |              |             |

Note: The default supported Transfer Syntax is ILE. ELE has preference over ILE.

#### 4.2.1.3.1.3. SOP Specific Conformance for Verification SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM Manager provides standard conformance to the DICOM V3.0.

#### 4.2.1.3.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### **Table 16: Status Response**

| Service Status     | Error Code | Further Meaning                  | Behavior   |
|--------------------|------------|----------------------------------|--|
| Success            | 0000       | Success                          | The SCU has successfully send C-ECHO.                |
| Other than Success | <>0000     | Problems with sending the C-ECHO | The SCU failed to send the C-ECHO; user is notified. |

#### 4.2.1.3.2. (Real-World) Activity – Modality worklist As SCU

#### 4.2.1.3.2.1. Description and Sequencing of Activities

#### 4.2.1.3.2.2. Proposed Presentation Contexts

The presentation contexts are defined in the next table.

#### Table 17: Proposed Presentation Contexts for (Real-World) Activity – Modality worklist As SCU

|                               | Present                | ation Context Table       |                     | _            |             |  |
|-------------------------------|------------------------|---------------------------|---------------------|--------------|-------------|--|
| Abstract Syntax               |                        | Transfer Syntax           |                     | <b>D</b> ala | Extended    |  |
| Name                          | UID                    | Name List                 | UID List            | Role         | Negotiation |  |
| Modality Worklist Information | 1.2.840.10008.5.1.4.31 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCU          | None        |  |
| Model - FIND SOP Class        |                        | Implicit VR Little Endian | 1.2.840.10008.1.2   |              |             |  |

#### 4.2.1.3.2.3. SOP Specific Conformance for Modality Worklist Information Model - FIND SOP Class

This section and sub-section include the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

#### 4.2.1.3.2.3.1. Dataset Specific Conformance for Modality Worklist Information Model - FIND SOP Class C-FIND-SCU

|                 | e Dataset Specific response behavior will be reported in this section.<br>Jould be read as follows:  |
|-----------------|--|
| Attribute Name: | Attributes supported to build a Modality Worklist Request Identifier.  |
| Tag:            | DICOM tag for this attribute.  |
| VR:             | DICOM VR for this attribute.   |
| M:              | Matching Keys. An "X" indicates that this attribute is used for (automatic) Worklist Update.   |
| R:              | Return Keys. An "X" will indicate that this attribute will be supplied as a Return Key with zero length for Universal                            |
| Matching.       |  |
| Q:              | Interactive Query Key. An "X" will indicate that Worklist attribute can be used as matching key  |
| D:              | Displayed Keys. An "X" indicates that this Worklist attribute is displayed to the user during a patient registration dialog.                     |
| IOD:            | An "X" indicates that this Worklist attribute is included into all object Instances created during<br>performance of the related Procedure Step. |

## Type of matching: The following types of matching exists: Single Value Matching List of UID Matching Wild Card Matching Range Matching Sequence Matching Universal Matching

### Table 18: Worklist Request Identifier

| Attribute Name  | Tag       | VR | М | R   | Q      | D     | IOD      | Type of<br>Matching       | Comment |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 23: Status Response

| Service Status     | Error Code | Further Meaning                         | Behavior  |
|--------------------|------------|---|---|
| Success            | 0000       | e.g. Matching is complete               | e.g. The SCU has successfully returned all matching information |
| Other than Success | <>0000     | Problems with sending the N-SET Request |   |

#### 4.2.1.3.4. (Real-World) Activity – FIND As SCU

#### 4.2.1.3.4.1. Description and Sequencing of Activities

DICOM-Manager initiates an association when the user clicks on one of the icons in the devices tool-bar. The DICOM-Manager searches (C-FIND) by Study Level following by Series level and, optionally (configurable), by Image Level.

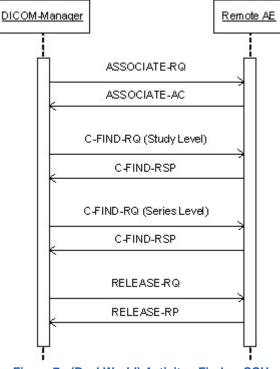

Figure 7: (Real World) Activity - Find as SCU

#### 4.2.1.3.4.2. Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association. In this subsection, the presentation contexts proposed by Archive-Manager for (Real-World) Activity - Find as SCU are defined in the Table below.

#### Table 24: Proposed Presentation Contexts for (Real-World) Activity – FIND As SCU

| Presentation Context Table |                             |                           |                     |          |             |  |  |  |  |
|----------------------------|-----------------------------|---------------------------|---------------------|----------|-------------|--|--|--|--|
| Abstrac                    | t Syntax                    | Transfer S                | Role                | Extended |             |  |  |  |  |
| Name                       | UID                         | Name List                 | UID List            | Role     | Negotiation |  |  |  |  |
| Study Root QR Information  | 1.2.840.10008.5.1.4.1.2.2.1 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCU      | None        |  |  |  |  |
| Model - FIND SOP Class     |                             | Implicit VR Little Endian | 1.2.840.10008.1.2   |          |             |  |  |  |  |

#### 4.2.1.3.4.3. SOP Specific Conformance for Study Root QR Information Model - FIND SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The DICOM-Manager provides standard conformance to the DICOM V3.0.

#### 4.2.1.3.4.3.1. Dataset Specific Conformance for Study Root QR Information Model - FIND SOP Class C-FIND-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

#### Table 25: Supported Query Keys for Study Root Information Model

| Study Root Information Model |           |    |                  |                       |  |  |  |  |  |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 26: Status Response

| Service Status | Error Code | Further Meaning                  | Behavior                |
|----------------|------------|----------------------------------|-------------------------|
| Success        | 0000       | Success                          | Matching is successful. |
| Failure        | A700       | Refused - Out of resources       |                         |
|                | A900       | Failed - Doesn't match SOP class |                         |
|                | Cxxx       | Failed - Unknown reason          |                         |

#### 4.2.1.3.5. (Real-World) Activity – MOVE As SCU

#### 4.2.1.3.5.1. Description and Sequencing of Activities

The RWA Move Remote Images involves the retrieve of images on a remote system by moving (copying) the matching images from the remote database to another database.

The operator is able to copy the selected images in a patient folder from a remote database to another, local or remote, database by means of the copy tool in the DICOM Manager data handling facility. The DICOM Manager initiates for each copy request an association to the selected peer entity (Remote AE) and uses it to send the Retrieve (C-MOVE) request (and receive the associated responses). The association is released after the final Retrieve (C-MOVE) response for the related request has been received with the status success / failure.

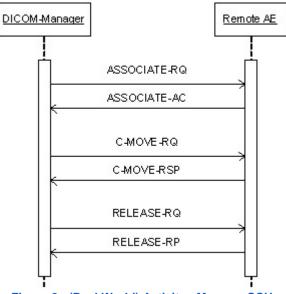

Figure 8: (Real World) Activity - Move as SCU

#### 4.2.1.3.5.2. Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association.

In this subsection, the presentation contexts proposed by DICOM-Manager for (Real-World) Activity - Move as SCU are defined in the following table.

#### Table 27: Proposed Presentation Contexts for (Real-World) Activity – MOVE As SCU

| Presentation Context Table |                             |                           |                     |      |             |  |  |  |  |
|----------------------------|-----------------------------|---------------------------|---------------------|------|-------------|--|--|--|--|
| Abstra                     |                             | Extended                  |                     |      |             |  |  |  |  |
| Name                       | UID                         | Name List                 | UID List            | Role | Negotiation |  |  |  |  |
| Study Root QR Information  | 1.2.840.10008.5.1.4.1.2.2.2 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCU  | None        |  |  |  |  |
| Model - MOVE SOP Class     |                             | Implicit VR Little Endian | 1.2.840.10008.1.2   |      |             |  |  |  |  |

#### 4.2.1.3.5.3. SOP Specific Conformance for Study Root QR Information Model - MOVE SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM-Manager provides standard conformance to the DICOM V3.0 Query/Retrieve Service Class as an SCU for the SOP Class Study Root Query/Retrieve Information Model - Move.

#### 4.2.1.3.5.3.1. Dataset Specific Conformance for Study Root QR Information Model - MOVE SOP Class C-MOVE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section. Table 28: Identifiers for MOVE Study Root Information Model as SCU

| Study Root Information Model |           |    |                       |  |  |  |
|------------------------------|-----------|----|-----------------------|--|--|--|
| Attribute Name               | Тад       | VR | Comment               |  |  |  |
| Query/Retrieve Level         | 0008,0052 | CS | STUDY, SERIES, IMAGES |  |  |  |
| Q/R Study level              |           |    |                       |  |  |  |
| Study Instance UID           | 0020,000D | UI |                       |  |  |  |

|                     |           |    | Q/R Series level |
|---------------------|-----------|----|------------------|
| Series Instance UID | 0020,000E | UI |                  |
| Study Instance UID  | 0020,000D | UI |                  |
|                     |           |    | Q/R Image level  |
| Series Instance UID | 0020,000E | UI |                  |
| SOP Instance UID    | 0008,0018 | UI |                  |
| Study Instance UID  | 0020,000D | UI |                  |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 29: Status Response

| Service<br>Status | Error<br>Code | Further Meaning                                   | Behavior   |
|-------------------|---------------|---|--|
| Success           | 0000          | Success   | Storage successful.  |
| Failure           | A701          | Refused - Out of Resources                        | Message by transfer result - Unable to calculate number of matches.        |
| A702              |               | Refused - Out of Resources                        | Message by transfer result - Unable to perform sub operations              |
|                   | A801          | Refused - Move Destination Unknown                | Message by transfer result - Move Destination Unknown.                     |
|                   | A900          | Error - Identifier Does Not Match SOP Class       | Message by transfer result - Identifier does not match SOP Class.          |
|                   | Cxxx          | Error - Unable to Process                         | Message by transfer result - Unable to process.                            |
| Warning           | B000          | Sub-operations complete - One or more<br>failures | Message by transfer result - Sub operations complete one or more failures. |
| Cancel            | FE00          | Cancel  | Move operation cancelled.  |

#### 4.2.1.3.6. (Real-World) Activity – Image Export

#### 4.2.1.3.6.1. Description and Sequencing of Activities

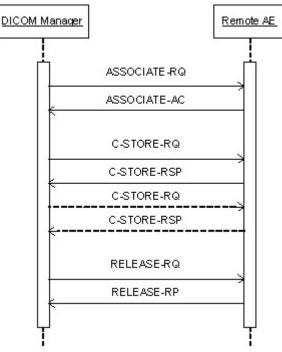

Figure 9: (Real World) Activity - Image Export

The associated Real-World Activity is a request for retrieval of images from the disk or save operation from Ingenuity CT applications and storage of the images to a remote system using a C-STORE command.

#### 4.2.1.3.6.2. Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association.

The system configuration (by FSE in LanConfig) allows disabling individually each of the supported syntaxes per remote device when establishing and accepting associations. At least one of the syntaxes will be enabled.

When establishing association to a remote device, all the enabled (for that device) syntaxes will be proposed based on the SOP Class. If more than one Transfer Syntax is accepted by the SCP, the order of selecting the syntax to use is: P-ELE, JPEG, ELE and ILE. However if the proposed SOP class does not contain any pixel data then only ELE and ILE will be proposed.

When a device is newly added in LanConfig, by default the selected transfer syntaxes for the device are ELE & ILE. If the device is a Philips device which is more recent than Ingenuity CT then P-ELE will also selected by default. The user will have the option of changing the selected transfer syntax per device using LanConfig.

Ingenuity CT supports Level2 DICOM transparency and hence will preserve all the source image data.

The presentation contexts proposed by the DICOM Manager for (Real-World) Activity (C-STORE SCU) are defined in the following table.

#### Table 30: Proposed Presentation Contexts for (Real-World) Activity – Image Export

| Presentation Context Table                      |                               |  |                        |      |             |  |  |  |
|---|-------------------------------|--|------------------------|------|-------------|--|--|--|
| Abstrac   | t Syntax                      | Transfe  | r Syntax               | Role | Extended    |  |  |  |
| Name  | UID                           | Name List  | UID List               |      | Negotiation |  |  |  |

| Storage SOP Class          |                               | Implicit VR Little Endian                                | 1.2.840.10008.1.2      |      |             |  |  |

"JPEG" here refers to JPEG Lossless, Non-Hierarchical, First-Order Prediction (Process 14 [Selection Value 1]): Default Transfer Syntax for Lossless JPEG Image Compression.

It will apply the following priorities to the choice of Transfer Syntax which can be configured in LAN Config Tool:

#### **Table 31: Transfer Syntax Priorities**

| Transfer Syntax   | UID                    | Comment   |
|---|------------------------|---|
| 1. Private DICOM Explicit VR Little Endian (CT-private-<br>ELE) | 1.3.46.670589.33.1.4.1 | LanConfig. Default for Ingenuity CT                                       |
| 2. DICOM JPEG Lossless, Non-Hierarchical, FOP (Process 14)      | 1.2.840.10008.1.2.4.70 | LanConfig, Transfer Syntax for Lossless JPEG Image<br>Compression (JPEG). |
| 3. DICOM Explicit VR Little Endian                              | 1.2.840.10008.1.2.1    | LanConfig.  |
| 4. DICOM Implicit VR Little Endian                              | 1.2.840.10008.1.2      | LanConfig, default.   |

Note: No support of JPEG & P-ELE transfer syntaxes for all SOP classes without pixel data.

#### 4.2.1.3.6.3. SOP Specific Conformance for Storage SOP Classes

DICOM Manager AE provides standard conformance to the DICOM V3.0 Storage Service Class as an SCU for SOP Classes mentioned in the previous section.

Any unsuccessful status (error or warning), returned in the C-STORE Response, results in termination of sending further C-STORE requests (if any in the queue) and reporting of the error to the system log file and UI (Queue Manager)

There are two timeouts for the association. One timeout, "Association Timeout" is used to close an idle association. For C-STORE the default is 120 sec and can be configured per remote DICOM node. The other timeout is "Service Timeout" which detects that no data is transmitted over the association and closes it. The default "Service Timeout" for C-STORE is 5 minutes.

#### 4.2.1.3.6.3.1. Dataset Specific Conformance for C-STORE-RQ

Detail regarding the Dataset Specific response behavior will be reported in this section. This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 32: Status Response

| Service Status | Error Code | Further Meaning                     | Behavior                                       |
|----------------|------------|-------------------------------------|--|
| Success        | 0000       | Success                             | Storage successful.                            |
| Failure        | 0122       | Refused - SOP Class not supported   | Message by transfer result - Unknown reason.   |
| A700           |            | Refused - Out of Resources          | Message by transfer result - Out of Resources. |
|                | A900       | Error - Data Set does not match SOP | Message by transfer result - Unknown reason.   |
|                | C000       | Error - Cannot understand           | Message by transfer result - Store failed.     |
| Warning        | B000       | Coercion of Data Elements           | Warning status is treated as success.          |
|                | B006       | Elements Discarded                  | Warning status is treated as success.          |
|                | B007       | Data Set does not match             | Warning status is treated as success.          |

#### 4.2.1.3.7. (Real-World) Activity – Storage Commitment Push Model AS SCU

#### 4.2.1.3.7.1. Description and Sequencing of Activities

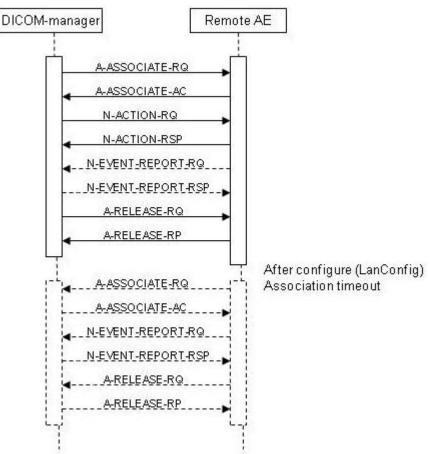

Figure 10: (Real World) Activity- DICOM Manager (Storage Commitment)

DICOM-Manager will attempt to initiate a new association when requested to commit the images that were stored on a remote device, which supports the storage Commitment Service.

The associated real world activity for the N-ACTION is a storage commitment request to the remote storage device.

The associated real world activity for the N-EVENT-REPORT operation is the completion of the storage commitment by the remote device.

This can be as Synchronous storage commitment as the N-EVENT-REPORT-RQ is received inside the configure timeout or as Asynchronous storage commitment after the Release-RQ by the timeout is already send to the remote system. DICOM-Manager will issue a failure status if it is unable to properly handle the storage commitment report event.

#### 4.2.1.3.7.2. Proposed Presentation Contexts

Each time an association is initiated, the association initiator proposes a number of presentation contexts to be used on that association.

The presentation contexts proposed by DICOM Manager for (Real-World) Activity - Storage Commitment as SCU are defined in the following table.

#### Table 33: Proposed Presentation Contexts for (Real-World) Activity – Storage Commitment Push Model AS SCU

| Presentation Context Table |                      |                           |                     |      |             |  |  |  |
|----------------------------|----------------------|---------------------------|---------------------|------|-------------|--|--|--|
| Abstrac                    | Dala                 | Extended                  |                     |      |             |  |  |  |
| Name                       | UID                  | Name List                 | UID List            | Role | Negotiation |  |  |  |
| Storage Commitment Push    | 1.2.840.10008.1.20.1 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCU  | None        |  |  |  |
| Model SOP Class            |                      | Implicit VR Little Endian | 1.2.840.10008.1.2   |      |             |  |  |  |

#### 4.2.1.3.7.3. SOP Specific Conformance for Storage Commitment Push Model SOP Class

DICOM-Manager provides standard conformance to the DICOM V3.0 Storage Commitment Service Class using Push Model as an SCU.

Multiple N-ACTION-RQ can be performed over a single association. Multiple N-EVENT-REPORT-RQ can be accepted over a single association. After all N-ACTION-RQ that are waiting in the stack are issued, association will be closed with the timeout which is configurable using LanConfig.

A remote system reports about storage commitment completion using an N-EVENT-REPORT-RQ command. The system can also accept the N-EVENT-REPORT-RQ commands over a separate association initiated by the remote system, using reverse role negotiation.

Storage Commitment for individual images are grouped into large "chunks" and issued as a single Storage Commitment request.

#### Table 34: DICOM Command Communication Failure Bahavior Storage Commitment

| Exception                | Behavior   |
|--------------------------|--|
| ARTIM Time-out           | The reason in logged   |
| Reply Time-out           | The association is released. Continues with waiting for storage commitment |
| Association Time-out SCU | The association is released. Continues with waiting for storage commitment |
| Association aborted      | Continues with waiting for storage commitment                              |

#### 4.2.1.3.7.3.1. Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-EVENT-REPORT-SCP

All details regarding the specific conformance, including response behavior to all status codes, both from an application level and communication errors are provided in following tables for N-EVENT-REPORT.

#### Table 35: Storage Commitment N-EVENT-REPORT Behavior

| Event Type Name   | Event<br>Type | Behavior  |
|---|---------------|---|
| Storage Commitment Request Successful                   | 1             | Awaiting Storage Commitment request will be moved to complete in Queue Manager. |
| Storage Commitment Request Complete - Failures<br>Exist | 2             | Awaiting Storage Commitment request will be moved to fail in Queue Manager.     |

#### Table 36: Storage Commitment N-EVENT-REPORT Failure Handling Behavior

| Service Status | Error Code | Further Meaning | Description   |
|----------------|------------|-----------------|---|
| Success        | 0000       | Success         | The storage commitment result has been successfully received. |

#### 4.2.1.3.7.3.2. Dataset Specific Conformance for Storage Commitment Push Model SOP Class N-ACTION-SCU

All details regarding the specific conformance, including response behavior to all status codes, both from an application level and communication errors are provided in following tables for N-ACTION.

#### Table 37: Status Response

| Service Status        | Error<br>Code | Further Meaning                               | Behavior  |
|-----------------------|---------------|---|---|
| Success               | 0000          | Success                                       | The request for storage commitment is considered successfully stored. |
| Other than<br>Success | <>0000        | Problems with sending the N-ACTION<br>Request | The request for storage commitment is marked as failed.               |

#### 4.2.1.4. Association Acceptance Policy

The Application Entity may reject Association attempts as shown in the table below.

#### Table 38: DICOM Association Rejection Policies

| Result                    | Source  | Reason/Diagnosis  | Explanation  |
|---------------------------|---|---|--|
| 1 - rejected<br>permanent | •   | 2 - application-context-name-<br>not-supported  | When receiving association request and the application context name is not supported.  |
|                           |   | 3 - calling-AE-title-not-<br>recognized   | When receiving association request and the calling AE title is not supported.  |
|                           |   | 7 - called-AE-title-not-<br>recognized  | When receiving association request and the called AE title is not supported.   |
|                           | 2 - DICOM UL service-<br>provider (ACSE related | 1 - no-reason-given   | When receiving association request and all of the items in the presentation context item list are not supported by the system. |
| function)                 | 2 - protocol-version-not-<br>supported          | When receiving an association request and the protocol version received is not supported. |  |

The behavior of the AE on DICOM receiving Association Abort Handling is summarized in table below:

#### Table 39: DICOM receiving Association Abort Handling

| Source  | Reason/Diagnosis                | Behavior                  |
|---|---------------------------------|---------------------------|
| 0 - DICOM UL service-user (initiated abort)     | 0 - reason-not-specified        | The connection is closed. |
| 2 - DICOM UL service-provider (initiated abort) | 0 - reason-not-specified        | The connection is closed. |
|   | 1 - unrecognized-PDU            | The connection is closed. |
|   | 2 - unexpected-PDU              | The connection is closed. |
|   | 4 - unrecognized-PDU parameter  | The connection is closed. |
|   | 5 - unexpected-PDU parameter    | The connection is closed. |
|   | 6 - invalid-PDU-parameter value | The connection is closed. |

The behavior of the AE for sending an association abort is summarized in next table.

#### Table 40: Association Abort Policies

| Source   | Reason/Diagnosis             | Behavior  |
|--|------------------------------|---|
| 0 - DICOM UL service-<br>user (initiated abort)        | 0 - reason-not-<br>specified | When an association timeout (configurable per remote device) expired (timeout which determines how long to keep an idle association). When receiving a PDU whose size is bigger than the agreed max PDU size. |
| 2 - DICOM UL service-<br>provider (initiated<br>abort) | 1 - unrecognized-<br>PDU     | Whenever the system receives unexpected or unrecognized PDU (according to the DICOM UPPER LAYER PROTOCOL STATE TRANSITION TABLE in chapter 8 of the DICOM standard).  |

#### 4.2.1.4.1. (Real-World) Activity – Verification as SCP

#### 4.2.1.4.1.1. Description and Sequencing of Activities

A remote system requests verification from DICOM Manager using the C-ECHO command.

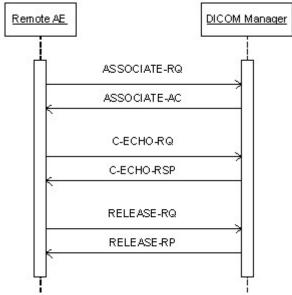

Figure 11: (Real World) Activity - Verification as SCP

#### 4.2.1.4.1.2. Accepted Presentation Contexts

The presentation contexts are defined in next table.

#### Table 41: Acceptable Presentation Contexts for (Real-World) Activity – Verification as SCP

| Presentation Context Table |                   |                           |                     |      |             |  |  |
|----------------------------|-------------------|---------------------------|---------------------|------|-------------|--|--|
| Abs                        |                   | Extended                  |                     |      |             |  |  |
| Name                       | UID               | Name List                 | UID List            | Role | Negotiation |  |  |
| Verification SOP Class     | 1.2.840.10008.1.1 | Explicit VR Little Endian | 1.2.840.10008.1.2.1 | SCP  | None        |  |  |
|                            |                   | Implicit VR Little Endian | 1.2.840.10008.1.2   |      |             |  |  |

#### 4.2.1.4.1.3. SOP Specific Conformance for Verification SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM Manager (C-ECHO SCP) provides standard conformance to the DICOM V3.0 verification SOP Class.

#### 4.2.1.4.1.3.1. Dataset Specific Conformance for Verification C-ECHO SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

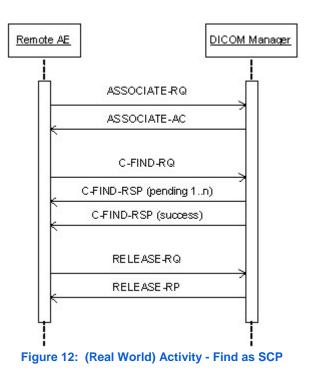

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 42: Status Response

| Service Status | Error Code | Further Meaning | Behavior                                |
|----------------|------------|-----------------|---|
| Success        | 0000       | Success         | C-ECHO command was successful received. |

#### 4.2.1.4.2. (Real-World) Activity – FIND As SCP

#### 4.2.1.4.2.1. Description and Sequencing of Activities

The Real World activity associated with the C-FIND-SCP is querying of the local data base based on C-FIND-RQ from the remote DICOM node. DICOM Manager will issue a failure status if it is unable to process the query request.

#### 4.2.1.4.2.2. Accepted Presentation Contexts

The presentation contexts are defined in next table.

#### Table 43: Acceptable Presentation Contexts for (Real-World) Activity – FIND As SCP

| Presentation Context Table                          |                             |                           |  |      |             |  |  |
|---|-----------------------------|---------------------------|--|------|-------------|--|--|
| Abstrac   | t Syntax                    | Transfer                  | Syntax                                   | Dala | Extended    |  |  |
| Name  | UID                         | Name List                 | UID List                                 | Role | Negotiation |  |  |
| Study Root QR Information<br>Model - FIND SOP Class | 1.2.840.10008.5.1.4.1.2.2.1 | Explicit VR Little Endian | 1.2.840.10008.1.2.1<br>1.2.840.10008.1.2 | SCP  | None        |  |  |

#### 4.2.1.4.2.3. SOP Specific Conformance for Study Root QR Information Model - FIND SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM Manager provides standard conformance to the DICOM V3.0 Query/Retrieve Service Class as an SCP for the following SOP Class: Study Root Query/Retrieve Information Model - FIND, UID=1.2.840.10008.5.1.4.1.2.2.1.

#### 4.2.1.4.2.3.1. Dataset Specific Conformance for Study Root QR Information Model - FIND SOP Class C-FIND-SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

Ingenuity CT does not support Relational Search, a query that may contain any combination of keys at any level in the hierarchy. Starting at the top level in the Query/Retrieve Information Model, continuing until the Query/Retrieve level specified in the C-FIND request is reached.

All Required (R) and Unique (U) Study, Series and Image level keys for the Study Root Query/Retrieve Information Model are supported.

#### Unsupported fields will not be returned in the C-FIND response. Table 44: Requested Query Keys for Study Root Information Model

| Study Root Information Model            |           |    |                                      |         |  |  |  |
|---|-----------|----|--------------------------------------|---------|--|--|--|
| Attribute Name                          | Tag       | VR | Type Of Matching                     | Comment |  |  |  |
| Query/Retrieve Level                    | 0008,0052 | CS | Universal                            |         |  |  |  |
| Q/R Study level                         |           |    |                                      |         |  |  |  |

C-FIND-CANCEL is supported. However, some C-FIND responses may be forwarded before the C-FIND-CANCEL takes effect.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 45: Status Response

| Service Status | Error Code | Further Meaning        | Behavior                                |
|----------------|------------|------------------------|---|
| Success        | 0000       | Matching complete      | Matching successful.                    |
| Failure        | C000       | General failure status | Whenever the find operation failed.     |
| Cancel         | FE00       | Cancel                 | When receiving a cancel C-FIND request. |
| Pending        | FF00       | Pending                | For every C-FIND response received.     |

#### 4.2.1.4.3. (Real-World) Activity – MOVE As SCP

#### 4.2.1.4.3.1. Description and Sequencing of Activities

The Real World activity associated with the C-MOVE command is retrieval of images from the disk and storage of the images to a remote system using a C-STORE command. DICOM Manager will issue a failure status if it is unable to process the transfer request.

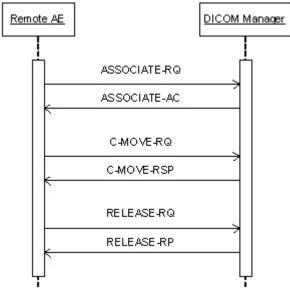

Figure 13: (Real World) Activity - Move as SCP

#### 4.2.1.4.3.2. Accepted Presentation Contexts

The presentation contexts are defined in next table.

#### Table 46: Acceptable Presentation Contexts for (Real-World) Activity – MOVE As SCP

| Presentation Context Table                          |                             |  |  |              |                 |  |
|---|-----------------------------|--|--|--------------|-----------------|--|
| Abstract Syntax Transfer Syntax                     |                             |  |  | Exten<br>ded |                 |  |
| Name  | UID                         | Name List  | UID List                                 | Role         | Negoti<br>ation |  |
| Study Root QR Information<br>Model - MOVE SOP Class | 1.2.840.10008.5.1.4.1.2.2.2 | Explicit VR Little Endian<br>Implicit VR Little Endian | 1.2.840.10008.1.2.1<br>1.2.840.10008.1.2 | SCP          | None            |  |

#### 4.2.1.4.3.3. SOP Specific Conformance for Study Root QR Information Model - MOVE SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM Manager provides standard conformance to the DICOM V3.0 Query/Retrieve Service Class as an SCP for the following SOP Class: Study Root Query/Retrieve Information Model - MOVE, UID=1.2.840.10008.5.1.4.1.2.2.2. Prioritization of C-MOVE requests is not supported.

#### 4.2.1.4.3.3.1. Dataset Specific Conformance for Study Root QR Information Model - MOVE SOP Class C-MOVE-SCP

Detail regarding the Dataset Specific response behavior will be reported in this section.

DICOM Manager does not support relational C-MOVE requests. All images requested in the C-MOVE will be sent over a single association.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

All details regarding the specific conformance, including response behavior of all status codes, both from an application level and communication errors are provided in the following table.

#### Table 47: Status Response

| Service Status | Error Code | Further Meaning                                | Behavior  |
|----------------|------------|--|---|
| Success        | 0000       | Matching complete                              | Whenever the move operation succeeded.                  |
| Failure        | A801       | Refused - Move Destination Unknown             | Whenever the move destination is unknown to the system. |
|                | C000       | Error - Unable to Process                      | Whenever the move operation failed.                     |
| Warning        | B000       | Sub-operations Complete - One or more Failures | Whenever one of the store operations failed             |
| Pending        | FF00       | Pending  | For every store response received.                      |
| Cancel         | FE00       | Cancel   | When receiving a cancel move request.                   |

#### 4.2.1.4.4. (Real-World) Activity – Image Import

#### 4.2.1.4.4.1. Description and Sequencing of Activities

The real world activity associated with the C-STORE operation is the storage of the image in the memory of the system upon which DICOM Manager is running in order to make it available for immediate processing by applications. DICOM Manager will issue a failure status if it is unable to store the image in the memory.

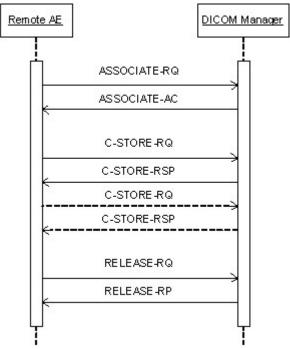

Figure 14: (Real World) Activity - Image Import

#### 4.2.1.4.4.2. Accepted Presentation Contexts

The presentation contexts are defined in next table.

|   | Presen                        | tation Context Table                                     |                        | _    | _           |
|---|-------------------------------|--|------------------------|------|-------------|
| Abstrac   | t Syntax                      | Transfe  | r Syntax               | Dala | Extended    |

#### Table 48: Acceptable Presentation Contexts for (Real-World) Activity – Image Import

**Note:** The default supported Transfer Syntax is ILE. All Transfer Syntaxes are configurable in LAN Config, in the order Private-ELE, JPEG, ELE, and ILE. JPEG has preference over ELE and ILE.

For all SOP classes without pixel data the JPEG transfer syntax will not supported.

#### 4.2.1.4.4.3. SOP Specific Conformance for Storage SOP Classes

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

DICOM Manager provides standard conformance to the DICOM V3.0 Storage Service Class as a SCP. DICOM Manager conforms to the SOPs of the Storage Service Class at Level 2 (Full). In case of a successful C-STORE, the stored image may be accessed by the processing applications.

#### 4.2.1.4.4.3.1. Dataset Specific Conformance for C-STORE-RSP

Detail regarding the Dataset Specific response behavior will be reported in this section. This includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 49: Status Response

| Service Status | Error Code | Further Meaning     | Behavior                                |
|----------------|------------|---------------------|---|
| Success        | 0000       | Successfully stored | Whenever the store operation succeeded. |
| Failure        | Сххх       | Failed              | Whenever the store operation failed.    |

### 4.2.2. Print Manager

Detail of this specific Application Entity is specified in this section.

#### 4.2.2.1. SOP Classes

This Application Entity provides Standard Conformance to the following SOP Classes.

#### Table 50: SOP Classes for Print Manager

| SOP Class Name                                  | SOP Class UID          | SCU | SCP |
|---|------------------------|-----|-----|
| Basic Color Print Management Meta SOP Class     | 1.2.840.10008.5.1.1.18 | Yes | No  |
| >Basic Film Session SOP Class                   | 1.2.840.10008.5.1.1.1  | Yes | No  |
| Basic Grayscale Print Management Meta SOP Class | 1.2.840.10008.5.1.1.9  | Yes | No  |
| >Basic Film Session SOP Class                   | 1.2.840.10008.5.1.1.1  | Yes | No  |

**Note:** Any SOP specific behavior is documented later in the conformance statement in the applicable SOP specific conformance section.

Note: The Printer SOP Class is not supported, even though it is included in the table above.

#### 4.2.2.2. Association Policies

Each AE specification contains a description of the general association establishment and acceptance policies of the AE.

#### 4.2.2.2.1. General

The maximum PDU Size that the Print-Manager will use is configurable, with a minimum of 2 Kbytes.

#### Table 51: DICOM Application Context

| Description              | Value                 |
|--------------------------|-----------------------|
| Application Context Name | 1.2.840.10008.3.1.1.1 |

#### 4.2.2.2.2. Number of Associations

The number of simultaneous associations that an Application Entity may support as an Initiator or Acceptor is specified.

Print-Manager can have only one open connection at a given time.

#### Table 52: Number of associations as an Association Initiator for this AE

| Description                                 | Value |
|---|-------|
| Maximum number of simultaneous associations | 1     |

#### 4.2.2.2.3. Asynchronous Nature

The implementation supports negotiation of multiple outstanding transactions, along with the maximum number of outstanding transactions supported.

Print-Manager will only allow a single outstanding operation on an association.

#### Table 53: Asynchronous nature as an Association Initiator for this AE

| Description   | Value |
|---|-------|
| Maximum number of outstanding asynchronous transactions | 1     |

#### 4.2.2.2.4. Implementation Identifying Information

The value supplied for Implementation Class UID and version name are documented here.

#### Table 54: DICOM Implementation Class and Version for Print Manager

| Implementation Class UID    | 1.3.46.670589.33.1.1 |
|-----------------------------|----------------------|
| Implementation Version Name | BRCONN_4.0           |

#### 4.2.2.2.5. Communication Failure Handling

Not applicable.

#### 4.2.2.3. Association Initiation Policy

The Application Entity will respond to a received Association rejection as shown in the next table.

#### Table 55: Association Rejection Response

| Service Status             | Error Code  |                       | Further Meaning                                | Behavior                  |
|----------------------------|---|-----------------------|--|---------------------------|
| 1 - rejected-<br>permanent | 1 - DICOM UL service-user                           |                       | 1 - no-reason-given                            | The connection is closed. |
|                            |   |                       | 2 - application-context-name-not<br>supported  | The connection is closed. |
|                            |   |                       | 3 - calling-AE-title-not-recognized            | The connection is closed. |
|                            |   |                       | 7 - called-AE-title-not-recognized             | The connection is closed. |
|                            | 2 - DICOM UL service-provider (AC                   | SE related function)  | 1 - no-reason-given                            | The connection is closed. |
|                            |   |                       | 2 - protocol-version-not-supported             | The connection is closed. |
|                            | 3 - DICOM UL service-provider(Presenta<br>function) | tation related        | 1 - temporary-congestion                       | The connection is closed. |
|                            |   |                       | 2 - Local-limit-exceeded                       | The connection is closed. |
| 2 - rejected-<br>transient | -   |                       | 1 - no-reason-given                            | The connection is closed. |
|                            |   |                       | 2 - application-context-name-not-<br>supported | The connection is closed. |
|                            |   |                       | 3 - calling-AE-title-not-recognized            | The connection is closed. |
|                            |   |                       | 7 - called-AE-title-not-recognized             | The connection is closed. |
|                            | 2 - DICOM UL service-provider<br>function)          | (ACSE related         | 1 - no-reason-given                            | The connection is closed. |
|                            |   |                       | 2 - protocol-version-not-supported             | The connection is closed. |
|                            | 3 - DICOM UL service-provider<br>function)          | (Presentation related | 1 - temporary congestion                       | The connection is closed. |
|                            |   |                       | 2 - local-limit-exceeded                       | The connection is closed. |

The behavior of the AE on receiving an association abort is summarized in next table.

#### **Table 56: Association Abort Handling**

| Source  | Reason/Diagnosis                | Behavior                  |
|---|---------------------------------|---------------------------|
| 0 - DICOM UL service-user (initiated abort)     | 0 - reason-not-specified        | The connection is closed. |
| 2 - DICOM UL service-provider (initiated abort) | 0 - reason-not-specified        | The connection is closed. |
|   | 1- unrecognized-PDU             | The connection is closed. |
|   | 2 - unexpected-PDU              | The connection is closed. |
|   | 4 - unrecognized-PDU parameter  | The connection is closed. |
|   | 5 - unexpected-PDU parameter    | The connection is closed. |
|   | 6 - invalid-PDU-parameter value | The connection is closed. |

#### 4.2.2.3.1. (Real-World) Activity – Print Management As SCU

#### 4.2.2.3.1.1. Description and Sequencing of Activities

After selecting the print destination (out of choice list of configured printers) and some print parameters (depending on the configuration and the selected printer; these values can be configured too), Print-Manager initiates an association when a print job is submitted to a DICOM printer (when the user clicks on the print button in the film view). The association is left open after the job is completed for a configurable time-out (so that if there are other jobs to the same printer, they will be done on the same association). Jobs to different printers are performed simultaneously.

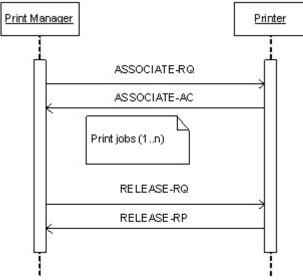

Figure 15: (Real World) Activity - Print Manager Initiates

Normally, when the job is completed and there are no other jobs to the same printer, the Print manager does close the association with an A-RELEASE request. If a TCP/IP connection timeout occurs, then the association is closed. In this case, a new association is set up when needed.

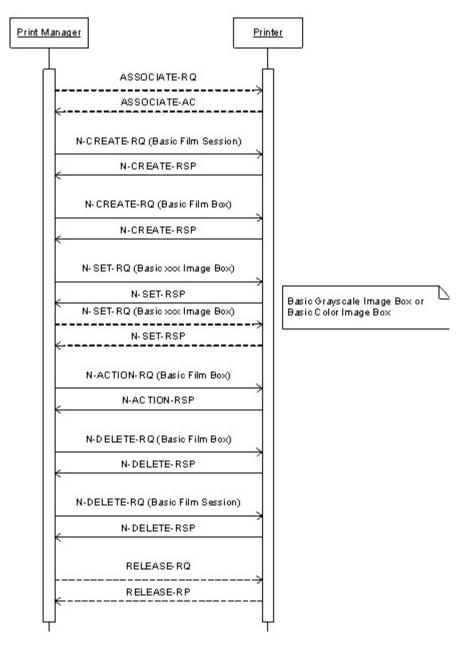

Figure 16: (Real World) Activity - Print Management as SCU

#### 4.2.2.3.1.2. Proposed Presentation Contexts

The presentation contexts are defined in next table.

#### Table 57: Proposed Presentation Contexts for (Real-World) Activity – Print Management As SCU

| Presentation Context Table                         |                         |                           |                     |      |                         |
|--|-------------------------|---------------------------|---------------------|------|-------------------------|

| 01033  |                         | Implicit VR Little Endian | 1.2.840.10008.1.2   |      |                         |

**Note:** The only supported default Transfer Syntaxes for printing are ELE and ILE.

This section specifies each IOD created (including private IOD's).

| Abbreviations used in the Module table for the column "Presence of Value" are: |  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|--|
| ALWAYS   | The attribute is always present with a value   |  |  |  |  |  |  |  |
| EMPTY  | The attribute is always present without any value (attribute sent zero length)                       |  |  |  |  |  |  |  |
| VNAP   | The attribute is always present and its Value is Not Always Present                                  |  |  |  |  |  |  |  |
|  | (attribute sent zero length if no value is present)  |  |  |  |  |  |  |  |
| ANAP   | The attribute is present under specified condition – if present then it will always have a value     |  |  |  |  |  |  |  |
| VNAPCV   | The attribute is present under specified condition – if present then its Value is Not Always Present |  |  |  |  |  |  |  |
|  | (attribute sent zero length if condition applies and no value is present)                            |  |  |  |  |  |  |  |
| ANAPEV   | The attribute is present under specified condition - if present then it will not have any value      |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| The abbreviations  | s used in the Module table for the column "Source" are:  |  |  |  |  |  |  |  |
| AUTO   | The attribute value is generated automatically   |  |  |  |  |  |  |  |
| CONFIG   | The attribute value source is a configurable parameter   |  |  |  |  |  |  |  |

| COPY     | The attribute value source is another SOP instance                                |
|----------|---|
| FIXED    | The attribute value is hard-coded in the application                              |
| IMPLICIT | The attribute value source is a user-implicit setting                             |
| MPPS     | The attribute value is the same as that use for Modality Performed Procedure Step |
| MWL      | The attribute value source is a Modality Worklist                                 |
| USER     | The attribute value source is explicit user input                                 |

## 4.2.2.3.1.3. SOP Specific Conformance for Basic Film Session SOP Class of the Basic Color Print Management Meta SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Printer process conforms to the Basic Film Session SOP Class. The following DIMSE service elements are supported: N-CREATE, N-DELETE.

#### 4.2.2.3.1.3.1. Dataset Specific Conformance for Basic Film Session SOP Class N-CREATE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

#### **Table 58: Basic Film Session Presentation Module**

| Attribute Name   | Тад       | VR | Value                           | Presence<br>of Value | Source          | Comment             |
|------------------|-----------|----|---------------------------------|----------------------|-----------------|---------------------|
| Number of Copies | 2000,0010 | IS |                                 | ALWAYS               | USER            | Value between 1-100 |
| Print Priority   | 2000,0020 | CS | AUTO, HIGH, LOW,<br>MED         | ANAP                 | USER            |                     |
| Medium Type      | 2000,0030 | CS | BLUE FILM, CLEAR<br>FILM, PAPER | ALWAYS               | CONFIG,<br>USER |                     |
| Film Destination | 2000,0040 | CS | MAGAZINE,<br>PROCESSOR          | ALWAYS               | CONFIG,<br>USER |                     |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 59: Status Response

| Service Status | Error Code | Further Meaning                   | Behavior   |
|----------------|------------|-----------------------------------|--|
| Success        | 0000       | Film Session successfully created | The print job continues.                           |
| Warning        | B600       | Memory Allocation not supported   | The print job continues and the warning is logged. |

#### 4.2.2.3.1.3.2. Dataset Specific Conformance for Basic Film Session SOP Class N-DELETE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 60: Status Response

| Service Status        | Error<br>Code | Further Meaning                      | Behavior  |
|-----------------------|---------------|--------------------------------------|---|
| Success               | 0000          | Film Session successfully<br>created | The SCP has completed the operation successfully.   |
| Other than<br>Success | <>0000        | Other status                         | On any other status then success, the job remains in the queue manager, with status failed. |

## 4.2.2.3.1.4. SOP Specific Conformance for Basic Film Session SOP Class of the Basic Grayscale Print Management Meta SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Printer process conforms to the Basic Film Session SOP Class. The following DIMSE service element is supported: N-CREATE, N-DELETE.

#### 4.2.2.3.1.4.1. Dataset Specific Conformance for Basic Film Session SOP Class N-CREATE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

#### Table 61: Basic Film Session Presentation Module

| Attribute Name   | Тад       | VR | Value                           | Presence<br>of Value | Source          | Comment             |
|------------------|-----------|----|---------------------------------|----------------------|-----------------|---------------------|
| Number of Copies | 2000,0010 | IS |                                 | ALWAYS               | CONFIG,<br>USER |                     |
| Print Priority   | 2000,0020 | CS | AUTO, HIGH, LOW,<br>MED         | ALWAYS               | CONFIG,<br>USER |                     |
| Medium Type      | 2000,0030 | CS | BLUE FILM, CLEAR<br>FILM, PAPER | ALWAYS               | USER            | Value between 1-100 |
| Film Destination | 2000,0040 | CS | MAGAZINE,<br>PROCESSOR          | ANAP                 | USER            |                     |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 62: Status Response

| Service Status | Error Code | Further Meaning                   | Behavior   |
|----------------|------------|-----------------------------------|--|
| Success        | 0000       | Film Session successfully created | The print job continues.                           |
| Warning        | B600       | Memory Allocation not supported   | The print job continues and the warning is logged. |

#### 4.2.2.3.1.4.2. Dataset Specific Conformance for Basic Film Session SOP Class N-DELETE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### **Table 63: Status Response**

| Service Status        | Error<br>Code | Further Meaning                      | Behavior  |
|-----------------------|---------------|--------------------------------------|---|
| Success               | 0000          | Film Session successfully<br>created | The SCP has completed the operation successfully.   |
| Other than<br>Success | <>0000        | Other status                         | On any other status then success, the job remains in the queue manager, with status failed. |

## 4.2.2.3.1.5. SOP Specific Conformance for Printer SOP Class of the Basic Color Print Management Meta SOP Class

Not applicable, Printer SOP Class is not supported.

#### 4.2.2.3.1.5.1. Dataset Specific Conformance for Printer SOP Class N-EVENT-REPORT-SCP

Not applicable, Printer SOP Class is not supported.

### **4.2.2.3.1.6. SOP Specific Conformance for Printer SOP Class of the Basic Grayscale Print Management Meta SOP Class** Not applicable, Printer SOP Class is not supported.

## 4.2.2.3.1.6.1. Dataset Specific Conformance for Printer SOP Class N-EVENT-REPORT-SCP

Not applicable, Printer SOP Class is not supported.

# 4.2.2.3.1.7. SOP Specific Conformance for Basic Film Box SOP Class of the Basic Grayscale Print Management Meta SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Printer process conforms to the Basic Film Box Sop Class. The following DIMSE service elements are supported: N-CREATE, N-ACTION, and N-DELETE.

#### 4.2.2.3.1.7.1. Dataset Specific Conformance for Basic Film Box SOP Class N-CREATE-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

| >Bits Allocated             | 0028,0100 | US    | 8                   | ALWAYS | AUTO |                                   |
| >Bits Stored                | 0028,0101 | US    | 8                   | ALWAYS | AUTO |                                   |
| >High Bit                   | 0028,0102 | US    | 7                   | ALWAYS | AUTO |                                   |
| >Pixel Representation       | 0028,0103 | US    | 0                   | ALWAYS | AUTO |                                   |
| >Pixel Data                 | 7FE0,0010 | OW/OB |                     | ALWAYS | AUTO |                                   |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 75: DICOM Command Response Status Handling Behavior for Basic Grayscale Image Box N-SET

| Service<br>Status | Error code     | Further meaning                             | Behavior  |
|-------------------|----------------|---|---|
| Success           | 0000           |   | The print job continues   |
| Warning           | 0107           |   | The print job is continues and the warning is logged.                               |
|                   | 0116           |   | The print job is continues and the warning is logged.                               |
|                   | B000 -<br>B007 |   | The print job is continues and the warning is logged.                               |
|                   | B604           |   | The print job continues, the warning is logged and reported to the user.            |
|                   | B605           |   | The print job continues, the warning is logged and reported to the user.            |
|                   | B609           |   | The print job continues, the warning is logged and reported to the user.            |
|                   | B60A           |   | The print job continues, the warning is logged and reported to the user.            |
| Error             | <xxxx></xxxx>  | All other error code not found in this list | The print job is marked as failed and the reason is logged and reported to the user |

# 4.2.2.3.1.10. SOP Specific Conformance for Basic Color Image Box SOP Class of the Basic Color Print Management Meta SOP Class

This section and sub-section includes the manufacturer SOP and Dataset specific information as well the status codes and their corresponding behavior.

The Printer process conforms to the Color Image Box Sop Class. The following DIMSE service element is supported: N-SET

#### 4.2.2.3.1.10.1. Dataset Specific Conformance for Basic Color Image Box SOP Class N-SET-SCU

Detail regarding the Dataset Specific response behavior will be reported in this section.

#### Table 76: Image Box Pixel Presentation Module

| Attribute Name              | Тад       | VR | Value | Presence<br>of Value | Source | Comment                           |
|-----------------------------|-----------|----|-------|----------------------|--------|-----------------------------------|
| Image Box Position          | 2020,0010 | US | 1     | ALWAYS               | AUTO   |                                   |
| Basic Color Image Sequence  | 2020,0111 | SQ |       | ALWAYS               | AUTO   |                                   |
| >Samples per Pixel          | 0028,0002 | US | 3     | ALWAYS               | AUTO   |                                   |
| >Photometric Interpretation | 0028,0004 | CS | RGB   | ALWAYS               | AUTO   |                                   |
| >Planar Configuration       | 0028,0006 | US | 0, 1  | ALWAYS               | AUTO   |                                   |
| >Rows                       | 0028,0010 | US |       | ALWAYS               | AUTO   | As in printer configuration file. |
| >Columns                    | 0028,0011 | US |       | ALWAYS               | AUTO   | As in printer configuration file. |
| >Pixel Aspect Ratio         | 0028,0034 | IS |       | ALWAYS               | AUTO   | Must be present if not 1/1.       |
| >Bits Allocated             | 0028,0100 | US | 8     | ALWAYS               | AUTO   |                                   |

| >Bits Stored          | 0028,0101 | US    | 8 | ALWAYS | AUTO |
|-----------------------|-----------|-------|---|--------|------|
| >High Bit             | 0028,0102 | US    | 7 | ALWAYS | AUTO |
| >Pixel Representation | 0028,0103 | US    | 0 | ALWAYS | AUTO |
| >Pixel Data           | 7FE0,0010 | OW/OB |   | ALWAYS | AUTO |

This part of the section includes the dataset specific behavior, i.e. error codes, error and exception handling, time-outs, etc.

#### Table 77: DICOM Command Response Status Handling Behavior for Basic Color Image Box N-SET

| Service<br>Status | Error<br>Code  | Further Meaning  | Behavior   |
|-------------------|----------------|--|--|
| Success           | 0000           | Image successfully stored in Image Box   | The print job continues.   |
| Warning           | 0107           | Attribute list error   | The print job continues and the warning is logged.                                   |
|                   | 0116           | Attribute out of range   | The print job continues and the warning is logged.                                   |
|                   | B000 -<br>B007 |  | The print job continues and the warning is logged.                                   |
|                   | B604           | Image Size is larger than Image Box Size - The Image has been de-<br>magnified   | The print job continues and the warning is logged and reported to the user.          |
|                   | B605           | Requested Min Density or Max Density outside of Printer's operating Range  | The print job continues and the warning is logged and reported to the user.          |
|                   | B609           | Image Size is larger than Image Box Size - The Image has been cropped to fit   | The print job continues and the warning is logged and reported to the user.          |
|                   | B60A           | Image Size or combined Print Image Size is larger than Image Box Size -<br>The Image or combined Print Image has been decimated to fit | The print job continues and the warning is logged and reported to the user.          |
| Error             | <xxxx></xxxx>  | all other errors than found in this list   | The print job is marked as failed and the reason is logged and reported to the user. |

#### 4.2.2.4. Association Acceptance Policy

Not applicable, Print Manager AE never accepts an association.

## 4.3. Network Interfaces

## 4.3.1. Physical Network Interfaces

The System provides only DICOM V3.0 TCP/IP Network Communication Support as defined in PS 3.8 of the DICOM standard.

Ingenuity CT inherits its TCP/IP stack from Windows 7 (i.e. the operating system platform).

Ingenuity CT supports a single network interface Ethernet ISO 8802-3. With standard supported physical medium include: IEEE 802.3-1995, 10BASE-T IEEE 802.3-1995, 100BASE-TX (Fast Ethernet) IEEE 802.3, 1000BASE-X (Fiber Optic Gigabit Ethernet).

## 4.3.2. Additional Protocols

Additional protocols such as used for network management are not applicable.

## 4.4. Configuration

Any implementation's DICOM conformance may be dependent upon configuration, which takes place at the time of installation. Issues concerning configuration are addressed in this section.

## 4.4.1. AE Title/Presentation Address Mapping

The Ingenuity CT system is configured by means of a configuration program. This program is accessible at start-up of the Ingenuity CT system. It is password protected and intended to be used by the administrator onsite or Philips Customer Support Engineers only.

Per configuration in LAN Config Tool, the system allows to accepts associations from a range of IP addresses (it will not check source IP or Calling AE Title). With incoming association requests the system allows acceptance of a range of defined IP addresses which is configurable in the LAN Config application. The system is not IP or AE title sensitive.

An important installation issue is the translation from AE title to presentation address. With incoming association requests the system allows acceptance of a range of defined IP addresses which is configurable in the LAN Config application. How this is performed is described in this section. The system is not IP or AE title sensitive.

#### 4.4.1.1. Local AE Titles

The local AE title mapping and configuration are specified as:

#### Table 78: AE Title configuration table

| Application Entity | Default AE Title  | Default TCP/IP Port |
|--------------------|---|---------------------|
| DICOM Manager      | SCU: <system ae="" title="">, SCP: <system ae="" title=""> or <local folder=""></local></system></system> | 104 (configurable)  |
| Print Manager      | <system ae="" title=""></system>  | Configurable        |

#### 4.4.1.2. Remote AE Title/Presentation Address Mapping

Remote AE Title, IP-Address, Port-number, supported DICOM Services and Transfer Syntaxes are freely configurable.

### 4.4.2. Parameters

The specification of important operational parameters, their default value and range (if configurable) is specified here.

### Table 79: Configuration General Parameters Table

| General Parameter  | Configurable     | Default Value  |  |  |
|--|------------------|--|--|--|
| Basic Parameters   |                  |  |  |  |
| Network - Computer Name  | Yes              | <hostname> Set during installation</hostname>  |  |  |
| Network - IP   | Yes              | (0.0.0.0)  |  |  |
| Network - Gateway  | Yes              | (0.0.0.0)  |  |  |
| System Port  | Yes              | 104  |  |  |
| System - AE Title  | Yes              | DATABASE   |  |  |
| Local - Auto Delete Enabled  | Yes              | Checked  |  |  |
| PDU  | No               | 65536 (Fixed)  |  |  |
| Transfer Syntax support, P- ELE, JPEG, ELE, ILE, There is a<br>configuration option to turn off /on, P-ELE, JPEG, ELE, ILE | Yes              | ELE, ILE (non-Philips device)Private ELE, JPEG, ELE, ILE (for latest versions of Philips devices i.e. 4.x) |  |  |
| Storage / Retrieve Timeout   | Yes              | 300 seconds  |  |  |
| ARTIM timeout  | Yes              | 300 seconds  |  |  |
| Max association number   | Yes              | 50   |  |  |
| Adva   | anced Parameters |  |  |  |
| Local - Auto Delete - Execute Only Once  | Yes              | UnChecked  |  |  |
| Local - Auto Delete - Days to keep study   | Yes              | 1  |  |  |
| Local - AutoDelete - Mbytes to Reserve   | Yes              | 11264  |  |  |
| Auto Import - Enable   | Yes              | Unchecked  |  |  |
| Auto Import - Input Folder Name  | Yes              | No Value   |  |  |
| Auto Import - Failed Folder Name   | Yes              | No Value   |  |  |
| Auto import - Import Type  | Yes              | DICOM  |  |  |
| Auto Import - PollingIntervalInSeconds   | Yes              | 60   |  |  |
| Verify Service Timeout in Seconds  | Yes              | 60   |  |  |
| Query Service Timeout in Seconds   | Yes              | 60   |  |  |
| Store Service Timeout in Seconds   | Yes              | 300  |  |  |
| Storage Commitment Service Timeout in Seconds  | Yes              | 300  |  |  |
| Retrieve Service Timeout in Seconds  | Yes              | 300  |  |  |
| Print Service Timeout in Seconds   | Yes              | 300  |  |  |
|  |                  |  |  |  |

#### Table 80: Configuration Local Parameters table

| Local Parameters                         | Configurable | Default Value |
|--|--------------|---------------|
| Advanced                                 | Parameter    |               |
| Local - Auto Delete - Execute Only Once  | Yes          | Unchecked     |
| Local - Auto Delete - Days to keep study | Yes          | 1             |
| Local - AutoDelete - Mbytes to Reserve   | Yes          | 12207         |
| Read Only Folder                         | Yes          | Unchecked     |
| Auto Import - Enable                     | Yes          | Unchecked     |
| Auto Import - Input Folder Name          | Yes          | No Value      |
| Auto Import - Failed Folder Name         | Yes          | No Value      |
| Auto Import - Import Type                | Yes          | DICOM         |
| Auto Import - PollingIntervalInSeconds   | Yes          | 60            |

#### Table 81: Configuration Remote Parameters Table

| Remote Parameters                       | Configurable      | Default Value |
|---|-------------------|---------------|
| Advanced                                | Parameter - Query |               |
| Association Timeout In Seconds          | Yes               | 300           |
| Lowest Support Level                    | Yes               | Image         |
| Query Response Size                     | Yes               | 100           |
| Advanced                                | Parameter - Store |               |
| Association Timeout In Seconds          | Yes               | 120           |
| Advanced Parameter - Retrieve           |                   |               |
| Association Timeout In Seconds          | Yes               | 0             |
| Advanced Parameter - Storage Commitment |                   |               |
| Association Timeout In Seconds          | Yes               | 120           |

#### Table 82: Configuration General Print Parameters Table

| General Print Parameter        | Configurable | Default Value |
|--------------------------------|--------------|---------------|
| Advanced I                     | Parameter    |               |
| Association Timeout In Seconds | Yes          | 150           |

Printers are configurable by a selection of the default printer types. Every printer type has a fixed configuration, but can be extended with new ones. The default printer settings are defined in the printer configuration file.

## 5. Media Interchange

## 5.1. Implementation model

The implementation model identifies the DICOM Application Entities for Media in specific implementation and relates the Application Entities to Real-World Activities.

## 5.1.1. Application Data Flow Diagram

As part of the implementation model, an application data flow diagram is included. The next Figure shows the media interchange application data flow as a functional overview of the Media AE for DICOM CD and DVD.

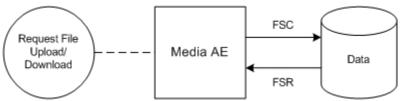

Figure 17: Media Interchange Application Data Flow Diagram

The Media AE acts as a FSR when reading the directory of the medium. The Media AE acts as a FSC when writing the selected images in a patient folder onto the CD-R / DVD medium.

The Media AE acts as a FSR, for CD-R and DVD, when reading the directory of the medium. The Media AE acts as a FSC for CD-R and DVD, when writing the selected images in a patient folder onto the medium.

## 5.1.2. Functional Definitions of AE's

This section contains a functional definition for each local Application Entity. It's described in general terms the functions to be performed by the AE, and the DICOM services used to accomplish these functions.

The Ingenuity CT system can Create and Read CD/DVD.

The Media AE in an Ingenuity CT system supports the following functions for CD and DVD as FSR:

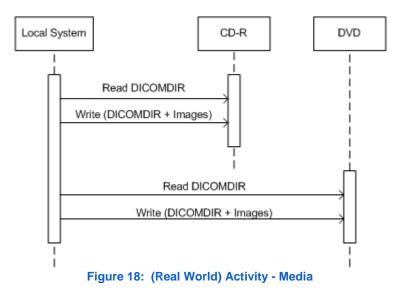

- Read the DICOMDIR File from the medium (representing the directory of the DICOM File(s) as recorded on the medium). This
  information may be displayed as an ordered list of icon images and, if present, with pertinent identifying information (patient name,
  etc.).
- Read the selected image from the medium and display it on the monitor of the View Station. This information is displayed as an ordered list of frames of the selected image or as a dynamic review of the selected image.

And for CD and DVD as FSC:

- Initialize the medium.
- Write a DICOM File-set onto the medium.
- Create a DICOMDIR File.
- Extend the DICOM File-set and update the DICOMDIR File accordingly. (DICOM Media Storage Service Class).

## 5.1.3. Sequencing of Real World Activities

A Real World Activity of the Media AE is: The user selects a set of objects to write to the CD/DVD. Then the CD /DVD will be created with the selected objects. Once the CD/DVD has been created, the user can read this CD/DVD on the Ingenuity CT system or for transport to another device for reading.

Another Real World Activity of the Media AE is: A CD/DVD from another system or previously created CD/DVD can be read by the Ingenuity CT system. The Ingenuity CT cannot append (FSU) to this created CD/DVD.

After data is written to DVD, the DVD is finalized; the finalized DVD can now be read on mostly every DVD reader.

## 5.2. AE Specifications

This section in the DICOM Conformance Statement specifies a set of Media Application Entities.

## 5.2.1. Media AE Media - Specification

The supported Application Profiles, their Roles and the Service Class options, all defined in DICOM terminology, are listed in the following table.

For reading and writing the media AE provides standard conformance to:

- DICOM media Storage Service and File Format ([DICOM] PS 3.10);
- Media Storage Application Profiles ([DICOM] PS 3.11); and
- Media Formats and Physical Media for Media Interchange ([DICOM] PS 3.12) for Reading (FSR) and Writing (FSC).

Ingenuity CT system does not support multi-session writes to CD/DVD's.

Supported media:

- <u>CD</u>: CD-R and CD-RW with the profile STD-GEN-CD.
- <u>DVD</u>: DVD-R, DVD+R, DVD-RW and DVD+RW with the profile: STD-GEN-DVD-JPEG as FSR.

The supported Application Profiles, their roles and the Service Class (SC) options, all defined in DICOM terminology, are listed in the next Table.

#### Table 83: AE Media AE related Application Profiles, RWA activities and roles

| Supported Application Profile | Identifier  | Real-World<br>Activities | Roles |
|-------------------------------|-------------|--------------------------|-------|
| CT/MR Studies on CD-R         | STD-CTMR-CD | Create File-set          | FSC   |
|                               |             | Read File-set            | FSR   |

| Supported Application Profile             | Identifier       | Real-World<br>Activities | Roles |
|---|------------------|--------------------------|-------|
|   |                  | Display<br>Directory     | DD    |
| General Purpose CD-R Interchange          | STD-GEN-CD       | Create File-set          | FSC   |
|   |                  | Read File-set            | FSR   |
|   |                  | Display<br>Directory     | DD    |
| CT/MR Studies on DVD Media                | STD-CTMR-DVD     | Create File-set          | FSC   |
|   |                  | Read File-set            | FSR   |
|   |                  | Display<br>Directory     | DD    |
| General Purpose DVD Interchange with JPEG | STD-GEN-DVD-JPEG | Create File-set          | FSC   |
|   |                  | Read File-set            | FSR   |
|   |                  | Display<br>Directory     | DD    |

#### 5.2.1.1. File Meta Information for the Media AE

This section contains the values of the file Meta Information that pertain to the Application Entity (see PS 3.10). These are:

- Source Application Entity Title,
- Private Information Creator UID,
- Private Information.

The Application Entity title is registered into the DICOM File Meta Information header and is supported by the CD/DVD-Writer (CD/DVD write option) acting as a FSC.

#### Table 84: File Meta Information for the Media AE

| Implementation Class UID    | 1.3.46.670589.33.1.1 |
|-----------------------------|----------------------|
| Implementation Version Name | BRCONN_4.0           |

#### 5.2.1.2. Real-World Activities

The AE specification contains a description of the Real-World Activities, which invoke the particular AE.

#### 5.2.1.2.1. RWA - Read File-set

When an image transfer from CD or DVD is initiated then the Media AE acts as an FSR using the interchange option to import SOP Instances from the CD or DVD medium.

#### 5.2.1.2.1.1. Media Storage Application Profile

The media AE supports the RWA Read File-set for the STD-CT/MR studies on CD, the STD-GEN-CD, the General Purpose DVD Interchange with JPEG and CT/MR Studies on DVD Media application profiles.

#### 5.2.1.2.1.1.1. Options

Not applicable.

#### 5.2.1.2.2. RWA - Create File-set

This Media Application Entity has a File-set Creator functionality which is describe here.

When an image transfer to CD/DVD is initiated then the Media AE acts as an FSC using the interchange option to export SOP Instances from the local database to a CD/DVD medium.

#### 5.2.1.2.2.1. Media Storage Application Profile

The application Profile that is used by this Media Application Entity is specified in this section.

As depicted in the table in section 5.2.1, the Media AE supports the RWA Write Images for the STD-CTMR-CD, STD-GEN-CD and the STD-GEN-DVD-JPEG Application Profile.

The DICOMDIR file will be extended when new images are written. In case some attributes are not present in an image but are specified as mandatory in the DICOMDIR definition in DICOM Media, a generated value will be filled in.

#### Implementation remarks and restrictions

When writing the DICOMDIR records, key values are generated when no value of the corresponding attribute is supplied, according to the following tables.

#### Table 85: Generated Keys

| Кеу             | Тад         | Generated Value                       |
|-----------------|-------------|---------------------------------------|
|                 |             | Study Keys                            |
| Study Date      | (0008,0020) | Date on which this Study was created. |
| Study Time      | (0008,0030) | Time on which this Study was created. |
|                 |             | Study Keys                            |
| Series Number   | (0020,0011) | 1                                     |
|                 |             | Image Keys                            |
| Instance Number | (0020,0013) | 1 (if empty)                          |

The data selected to write to the media must fit on the currently inserted media. If it does not fit, an error is generated and it is up to the operator to re-select a smaller amount of data to be written to the media. The system will not request additional media or write across multiple media.

#### Table 86: Supported attributes in the DICOMDIR

| DICOM Tag     | Description                                       |  |
|---------------|---|--|
| 0002,0000     | Group 0002 Length                                 |  |
| 0002,0001     | File Meta Information Version                     |  |

#### 5.2.1.2.2.1.1. Options

Not applicable.

#### 5.2.1.2.3. RWA - Display Directory

When a database open action is initiated on the CD/DVD then the Media AE acts as an FSR using the interchange option to read the DICOMDIR of the CD/DVD media.

This will results in an overview of the patients, studies, series and images on the Ingenuity CT screen.

#### 5.2.1.2.3.1. Media Storage Application Profile

The media AE supports the RWA Display Directory for the STD-CT/MR studies on CD, the STD-GEN-CD, the General Purpose DVD Interchange with JPEG and CT/MR Studies on DVD Media application profiles.

#### 5.2.1.2.3.1.1. Options

The mandatory DICOMDIR keys are required for the correct display of directory information. The display is structured according the DICOM Composite Information Model: Patient, Study, Series, and Image.

The DICOM standard specifies certain attributes of the DICOMDIR as mandatory. However, these attributes may not be mandatory for the related SOP class IOD. For those attributes the default values apply.

## 5.3. Augmented and Private Application Profiles

Not applicable

## 5.4. Media Configuration

Any configuration issues may be found in the Networking Section 4.4 Configuration.

## 6. Support of Character Sets

Any support for character sets in Network and Media services is described here.

#### Table 87: Supported DICOM Character Sets

| Character Set Description       | Defined Term | ESC<br>Sequence | ISO<br>Registration<br>Number | Code<br>Element               | Character Set |
|---------------------------------|--------------|-----------------|-------------------------------|-------------------------------|---------------|
| Latin alphabet No. 1 ISO_IR 100 | ISO_IR 100   | -               | ISO-IR 6                      | G0                            | ISO 646       |
|                                 | -            | ISO-IR 100      | G1                            | Supplementary set of ISO 8859 |               |
| Default repertoire              | -            | -               | ISO-IR 6                      | G0                            | ISO 646       |
|                                 |              | -               | -                             | -                             | -             |

## 7. Security

## 7.1. Security Profiles

Not applicable.

### 7.1.1. Security use Profiles

Not applicable.

### 7.1.2. Security Transport Connection Profiles

Not applicable.

### 7.1.3. Digital Signature Profiles

Not applicable.

### 7.1.4. Media Storage Security Profiles

Not applicable.

## 7.1.5. Attribute Confidentiality Profiles

No instances of the Encrypted Attributes Data Set are created. No Transfer Syntaxes are supported for encoding/decoding of Encrypted Attributes Data Sets.

The table below lists the attributes that are replaced during the anonymization process.

The terms used to describe the replacement value can be read as below:

- Empty: The attribute will have a value of zero length, is cleared by Ingenuity CT system.

- Copied: Attribute has same value as original.

#### Table 88: Basic Application Level Confidentiality Profile Attributes

| Attribute Name                          | Тад       | VR | Replacement Value  |
|---|-----------|----|--|
| Specific Character Set                  | 0008,0005 | CS | Copied from original   |

# 8. Annexes of application "uCT platform"

## 8.1. IOD Contents

## 8.1.1. Created SOP Instance

#### General rules

This section specifies each IOD created by this application.

The Ingenuity CT reflects the fact that the IOD created by the workstation are always based on some source images after the viewing/processing applied and the modified images are saved. Most of the attributes or even the whole modules (Patient, General Study, etc.) are just copied from the source images.

DICOM Overlays are only created for saved Secondary Capture SOP Class images. When images with ROI, Annotations, etc. (group 50xx) are saved as DICOM Secondary Captures, the 50xx groups attributes are converted into DICOM Overlays attributes (group 60xx). In case SCP does not support group 60xx attributes - the Ingenuity CT has a configurable option (in LAN Config) to burn the overlays into the pixel data thus allowing any PACS to display them.

The attribute "Burned In Annotation", for saving displays with multiple images has the value "YES". The attribute "Burned In Annotation" has the value "NO" for derived objects, if saved with "hide titles", (only for secondary capture SOP Class objects).

For Value Representation (VR) equal to Patient's Name (PN), the leading spaces into the Patient's Name will be treated as insignificant for matching purposes.

From the Patient's Name only the first 32 characters are displayed into the Quick View Viewer.

A Time attribute contains a string of characters of the format "hhmmss.frac". The Fractional part is always 3 decimal places.

#### Derived CT Image Attributes

Image Plane module attributes:

- All derived CT images, except curved (panoramic) slab, contain the Image Position (0028,0032) and Image Orientation (0028,0037) attributes.
- All derived CT (including curve slab) images contain the Pixel Spacing (0028,0030) and Slice Thickness (0018,0050) attributes.
- Non-Square pixels are not supported by "Ingenuity CT viewers".

#### Export Converters

A number of configurable export convertors allow the system to modify certain IOD when sent to specific SCP.

#### **Color-to-Monochrome Converter**

The Color (24-bits) SC IOD is converted to a monochrome 8-bit or 12 bit SC IOD, configurable by FSE. A new UID is generated for the converted image.

#### Burn Overlays Converter

The overlays on the images are burned into the Pixel data for the image and the DICOM overlay groups (50xx and 60xx) are removed from the IOD. This convertor works only on Secondary Capture IOD's.

#### Convert Philips Tags to CCA Cardiac Tags

Private Philips DICOM attributes are converted to allow the IOD to be processed by non-Philips systems.

#### Copied modules to the derived IOD's

The following table lists the modules that are always copied from the source images when the created SOP Class IOD is the same as the source SOP Class IOD.

#### Table 89: Modules copied to the derived IOD's table

| Information Entity | Module Name                   |
|--------------------|-------------------------------|
| Patient            | Patient Module                |
|                    | Clinical Trial Subject Module |
| Study              | General Study Module          |
|                    | Patient Study Module          |
|                    | Clinical Trial Study Modules  |
| Series             | General Series Modules        |
|                    | Clinical Trial Series Module  |
| Frame of Reference | Frame of Reference Module     |
| Equipment          | General Equipment Module      |

This section specifies each IOD created (including private IOD's). It should specify the attribute name, tag, VR, and value. The value should specify the range and source (e.g. user input, Modality Worklist, automatically generated, etc.). For content items in templates, the range and source of the concept name and concept values should be specified. Whether the value is always present or not shall be specified.

Abbreviations used in the IOD tables for the column "Presence of Module" are:

- ALWAYS The module is always present
- CONDITIONAL The module is used under specified condition

Abbreviations used in the Module table for the column "Presence of Value" are:

| ALWAYS          | The attribute is always present with a value   |
|-----------------|--|
| EMPTY           | The attribute is always present without any value (attribute sent zero length)                       |
| VNAP            | The attribute is always present and its Value is Not Always Present                                  |
|                 | (attribute sent zero length if no value is present)  |
| ANAP            | The attribute is present under specified condition – if present then it will always have a value     |
| ANAPCV          | The attribute is present under specified condition – if present then its Value is Not Always Present |
|                 | (attribute sent zero length if condition applies and no value is present)                            |
| ANAPEV          | The attribute is present under specified condition – if present then it will not have any value      |
|                 |  |
| The abbreviatio | ns used in the Module table for the column "Source" are:   |
| AUTO            | The attribute value is generated automatically   |
| CONFIG          | The attribute value source is a configurable parameter   |
| COPY            | The attribute value source is another SOP instance   |
| FIXED           | The attribute value is hard-coded in the application   |
| IMPLICIT        | The attribute value source is a user-implicit setting  |
| MPPS            | The attribute value is the same as that use for Modality Performed Procedure Step                    |
| MWL             | The attribute value source is a Modality Worklist  |
| USER            | The attribute value source is explicit user input  |
|                 |  |

Items in the Value and Comment columns in the following tables are filled in where appropriate to further clarify the use or meaning of each attribute beyond the definition provided by the DICOM Standard. All others are left blank for ease of use. See PS3.3 of the DICOM Standard for the complete attribute definitions

#### 8.1.1.1. List of created SOP Classes

#### Table 90: List of created SOP Classes

| SOP Class Name                            | SOP Class UID                 |
|---|-------------------------------|
| CT Image Storage SOP Class                | 1.2.840.10008.5.1.4.1.1.2     |
| Secondary Capture Image Storage SOP Class | 1.2.840.10008.5.1.4.1.1.7     |
| General ECG Waveform Storage SOP Class    | 1.2.840.10008.5.1.4.1.1.9.1.2 |
| X-Ray Radiation Dose SR                   | 1.2.840.10008.5.1.4.1.1.88.67 |

### 8.1.1.2. CT Image Storage SOP Class

#### Table 91: IOD of Created CT Image Storage SOP Class Instances

| Information Entity | Module                                | Presence Of Module |
|--------------------|---------------------------------------|--------------------|
| Patient            | Patient Module                        | ALWAYS             |
| Study              | General Study Module                  | ALWAYS             |
| Study              | Patient Study Module                  | ALWAYS             |
| Series             | General Series Module                 | ALWAYS             |
| Frame of Reference | Frame of Reference Module             | ALWAYS             |
| Equipment          | General Equipment Module              | ALWAYS             |

## 8.1.2. Usage of Attributes from Received IOD

The following attributes shall be present in the received IODs in order to be accepted:

#### For all IODs

- SOP Class UID (0008,0016)
- Study Instance UID (0020,000D)
- Series Instance UID (0020,000E)

#### For Image IODs

- Pixel Data (7FE0,0010) Size may not be 0.
- Bits Allocated (0028,0100)

## 8.1.3. Attribute Mapping

Not applicable.

## 8.1.4. Coerced/Modified fields

The Import/Export Transparency of DICOM objects means preserving the attributes' values of the objects imported from an external system (remote or removable), optionally processed and then exported to an external system.

The system complies with Level-2 requirements for Storage SCP as defined in DICOM PS 3.4 Appendix B4.1. In other words, all Type 1, Type 2, and Type 3 Attributes defined in the Information Object Definition (IOD) associated with the SOP Class, as well as any Standard Extended attributes (including Private Attributes) included in the SOP Instance, will be stored and may be accessed.

The system does not coerce any Data Elements, except those defined in the DICOM PS 3.4 Appendix B4.1. In other words, when a DICOM object is imported from another system and later exported, all the attributes values will remain unchanged.

In the received IODs, the following attributes may be modified under certain conditions.

#### **Table 137: Modified Attributes**

| Attribute        | Tag       | When Modified  |
|------------------|-----------|--|
| Patient's Name   | 0010,0010 | If Empty, the Patient's Name will be set to "Unknown".               |
| Patient ID       | 0010,0020 | If Empty, the Patient ID will be set to "Unknown".                   |
| Rows             | 0028,0010 | Is Fixed, if rows columns does not match pixel data size.            |
| SOP Instance UID | 0008,0018 | If missing, a new SOP Instance UID will be generate by Ingenuity CT. |

## 8.2. Data Dictionary of Private Attributes

Not applicable.

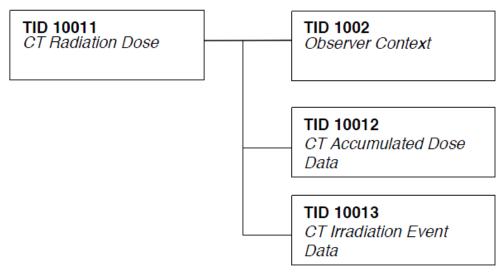

## 8.3. Coded Terminology and Templates

## 8.3.1. Context Groups

Not applicable.

## 8.3.2. Template Specifications

Ingenuity<sup>™</sup> CT scanner can optionally create and store, upon completion of the study, a DICOM CT RADIATION DOSE SR object. The templates that comprise the CT Radiation Dose SR are interconnected as indicated in the figure below:

CT Radiation Dose SR IOD Template Structure

This section describes the content of all the templates used in the CT Radiation Dose Reporting SR.

#### Table 138: Used Templates for CT Radiation Dose Reporting

### 8.5.1.3. General ECG Waveform Storage SOP Class

#### Table 150: Extended DICOM and private attributes for General ECG Waveform Storage SOP Class Instances

| Attribute Name               | Тад       | VR | Value | Presence<br>of Value | Source | Comment |
|------------------------------|-----------|----|-------|----------------------|--------|---------|
| Frame of Reference UID       | 0020,0052 | UI |       | ANAP                 | AUTO   |         |
| Position Reference Indicator | 0020,1040 | LO |       | ALWAYS               | AUTO   |         |
| Image Comments               | 0020,4000 | LT |       | ALWAYS               | AUTO   |         |

#### 8.5.1.4. X-Ray Radiation Dose SR

Extended DICOM and Private attributes are not applicable for this SOP class instance.

## 8.6. Private Transfer Syntaxes

Supported Private Transfer Syntaxes are shown in the next Table.

#### Table 151: Supported Private Transfer Syntaxes

| Transfer Syntax Name                                   | Transfer Syntax UID    | Comment              |
|--|------------------------|----------------------|
| Private CT Transfer Syntax - Explicit VR Little Endian | 1.3.46.670589.33.1.4.1 | Private ELE (P-ELE). |
